

## MILK PRODUCERS

*Here Is Why It Pays To Use*

# GREEN PASTURES

# Nutro-Sweet

1. A Dairy Feed Product developed by our Nutrition Department to aid in maintaining milk production when roughage quality goes down.
2. It **ECONOMICALLY** replaces the nutrients you are missing when your pasture suffers from the dry weather.
3. **VITAMIN A IS ALL IMPORTANT**  
So is Vitamin D. NUTRO-SWEET adequately replaces these essential vitamins which will not be found in a dry stemmy pasture or poor quality hay.
4. **MINERALS**, especially phosphorous normally found in good roughage now supplied by NUTRO-SWEET.
5. In Short NUTRO-SWEET is a very economical source of nutrients.
6. A good top feed for heavier producers or show animals.
7. Cows really enjoy its bulky course texture.
8. Nutro-Sweet is palatable and a good appetite stimulant.
9. Saves hay for winter feeding.
10. Economical to use — saves money — 4 lbs. Nutro-Sweet equal to 6 lbs. of top quality hay or 8-10 lbs. good quality roughage.

For an economical practical Dairy feeding and management program and better returns per feed dollar.

Contact any Miller & Bushong Service Representative for an appointment with our Dairy Specialist, or call us direct at Lancaster 392-2145.

### Crop Summary

## Rain Fall Brings Needed Moisture

A good steady rainfall this past week brought much needed moisture to almost all sections of the county. Legumes and grasses had been slowed to a near standstill previous to the rain.

Grain harvesting, hay making, spraying and cultivation of row crops were the main farm activities throughout the state.

Barley harvest was nearing completion. Yields generally are good with some fields producing over 80 bushels to the acre. Wheat combining started

Clover and timothy hay harvest is well advanced in all areas within the state. Alfalfa is resisting the dry weather better than the grasses. Pastures need more rain. Those in western counties generally are in good condition, but some in south central, southeastern and north central counties were poor.

The sweet cherry harvest passed its peak and the sour cherry harvest got under way.

Peaches are clean and firm. Thinning was nearly finished in southern areas. The grape set was not too great and the prospective crop will not be as large as hoped. Raspberries are being harvested.

Potatoes are in bloom and plants look good. Early planted tobacco is progressing well. Snap beans are being harvested in several southern areas by machine. Early sweet corn in some sections of the south are showing ears and, although not as far advanced, is growing rapidly in other areas. Some irrigation is being used on corn. Tomatoes are sizing up nicely in the south and near blossom in other areas, especially where irrigated. Lettuce and cabbage are being harvested in southern areas. Heat and lack of moisture hindered lettuce growth and caused undersized heads of cabbage. Strawberry harvest is near completion in practically all areas of the state.

## Flies got your cattle stewing?

Come in and see us for

# ORTHO Fly Killer D

This is the fly killer we recommend for surest, fast results: ORTHO Fly Killer D. You get a complete kill — not just a quick knockdown.

DIBROM insecticide is the secret of its fast, effective kill. It gets flies on contact, and it finishes the job fast — in less than 30 minutes. It's registered for use on cattle and dairy animals for face fly relief, too. You can spray above and around cattle and inside barns without removing cows. And you can spray in poultry houses when the birds are out.

So get rid of flies for good this summer. Spray Fly Killer D wherever they gather — dairy barns, poultry houses, livestock barns, pig pens. You need no special equipment and it works as a space spray or as dry or wet bait.

Ask us now for ORTHO Fly Killer D.
