**Ladies, Have You Heard? . . .**

By: Doris Thomas, Extension Home Economist

**Worth Knowing Anytime**  
 To pick up spider webs and loose dirt from plaster walls, use the wall brush on your vacuum cleaner and brush the wall from the bottom to the top. You can use a clean dust mop — no oil on it — if you wish.

Buy only enough bacon for one week, and for peak flavor and aroma don't freeze sliced bacon. Store bacon in its original wrapper in the refrigerator. If you must freeze bacon, freeze only a few pounds and don't keep it more than 30 days.

To add new flavor to the biscuit topping for a casserole, try this . . . roll biscuit dough in a rectangle, spread with herb or garlic butter, then roll up like a jelly roll. Cut into pinwheels and ring them around the casserole. Bake as you do regular biscuit topping.

**Where to Put Home Freezer?**  
 Where you place your home freezer influences its efficiency, convenience and operating cost. The most logical places are in the kitchen, utility room, entryway, porch, and basement. A kitchen location may be

the most convenient for saving time and energy, although one study shows that freezers located in a hot room in summer or a heated area during winter may use as much as 15 per cent more electricity. A freezer works best in a cool, dry, well ventilated area out of direct sunlight. But, do not place it where the temperature falls below 40 degrees. A dry basement is fine if you plan to make as few trips as possible up and down stairs. A damp basement is not a satisfactory place for a freezer.

Never squeeze the freezer into a niche in the wall or in a place with cabinets on three sides. Allow ample space. (Continued on Page 11)

**DO YOU KNOW HOW MUCH MILK YOUR COWS CAN REALLY GIVE?**

A cow is a factory. She eats grass, hay, silage, grain and Wayne Feeds. She makes milk. Each cow-factory has a certain bred-in capacity. When Bossy's assembly line isn't running at full capacity, she isn't making as much money for you as she should.

■ The way to find out if she's really running at full capacity is to put more feed in and see if you get more milk out. FEED HER ACCORDING TO WHAT SHE COULD GIVE TOMORROW, instead of what she gave yesterday. ■ Wayne can show you how to balance these larger feed intakes so that your cows can handle them. You feed the rumen bacteria too, so they can work harder and digest more roughage. ■ See us now for the Wayne Program that will work for you . . . choose from these quality Wayne Feeds . . .
