

Coccidiosis outbreaks at this time of year can be disastrous. Be prepared

Even under the best conditions, coccidiosis outbreaks can and do occur — especially after birds are in off the range. Read why Amprol Solution, of the many good coccidiostats on the market, is probably the best for controlling potentially ruinous outbreaks at this time of year.

When coccidiosis strikes, AMPROL (R) Solution does what you want it to do, does it promptly and with no unwanted side effects.

1. Amprol Solution stops coccidiosis fast. AMPROL Solution literally "starves" coccidia to death, works against mixed infections, helps wipe out mortality. It's been tested, tried and proved on millions of birds.

2. Amprol Solution doesn't cause setbacks. Even at several times the normal use level, AMPROL Solution is without unwanted side effects — won't interfere with feed intake and feed efficiency. And where hemorrhagic disease is a problem, Amprol Solution will not aggravate the condition, hence is the coccidiostat of choice.

3. Amprol Solution is easy to use — is fully palatable, so birds accept it readily, stirs smoothly into water and won't settle out or clog.

Note: If AMPROL Solution doesn't control a suspected coccidiosis outbreak in three to five days, better check the diagnosis. Could be some other disease giving you trouble.

Tops for broilers, too. More and more broiler growers everywhere are switching to AMPROL Solution to help control coccidiosis breaks — to help eliminate condemnations and downgrading.

Your supplier carries AMPROL Solution in 8-oz., 1-qt. and 1-gal. plastic containers. Order a supply today — and be prepared.
