"ANYONE MAY BUY FROM FARM BUREAU"

THE WINNING CHAPTER IN THE 13-COUNTY REGIONAL PARLIAMEN-  
 TARY PROCEDURE COMPETITION held at Millersville State Teachers College  
 last week was represented by the above Grassland FFA Chapter members: seated  
 (left to right), Dale Herr, George Zimmerman, Glenn Hoover, Sanford Gehman,  
 and Fred Nolt; standing (left to right), Glenn Weber, Robert Fisher, Raymond  
 Bowman, Leroy Musser, and William Fisher. This win entitles the Grassland  
 team to compete in the state finals to be held at Penn State during FFA Activities  
 Week in June.

**No milk residue.  
 Control alfalfa weevil  
 with new Alfa-tox.**

Here's a new insecticide for the control of alfalfa weevil and other forage insects that frees you of milk residue problems.

Just wait seven days after spraying with new Alfa-tox\* before you graze livestock or cut treated alfalfa for green chop or hay. That way, you're sure of no insecticide residue in milk or meat.

New Alfa-tox gives you dependable control of alfalfa weevil, even strains which have developed resistance to other insecticides.

Alfa-tox gives you a longer period of control. It effectively controls the alfalfa weevil larvae from two to three weeks.

Alfa-tox contains two outstanding insecticides; Diazinon® and Methoxychlor.

Alfa-tox is one of the least toxic forage insecticides to handle and it costs less. You can also depend on new Alfa-tox for unbeatable control of aphids, spittlebugs, leafhoppers, grasshoppers . . . and just about every other insect known to attack alfalfa. One insecticide, that's all,

and you've solved all your alfalfa insect problems, without milk or meat residues.

So keep close check on alfalfa weevil during the larval stage, when they're most destructive. Spray new Alfa-tox before the first cutting, at the first sign of damage.

If reinfestation occurs after the first cutting, spray Alfa-tox directly on the stubble. This will usually prevent damage from weevils for the rest of the growing season.

Depend on new Alfa-tox for unbeatable control of weevil and other alfalfa insects without any milk residue problem. See your local supplier or write to us for more information.

Geigy Agricultural Chemicals, Division of Geigy Chemical Corporation, Ardsley, New York.

**Now Is The Time**

(Continued from Page 4)  
 of grasses and annual broad-  
 leaf weeds (will give little  
 control on perennial broad-  
 leaf weeds) When sprayed  
 only over the row, less ma-  
 terial is needed and also, a  
 cover crop may be grown be-

tween the rows For only the  
 control of broadleaf weeds we  
 suggest the use of the Amine  
 form of 2,4-D either at plant-  
 ing time or when the corn is  
 in the spike stage Use the  
 minimum amount of Atiazine  
 per acre in order to avoid  
 damage to following grains  
 and crops

"Never used to see corn planting this accurate!"

**Precision corn planting calls for an  
 Allis-Chalmers 500 Series Unit Planter!**

The 500 Planter means *uniformity!* In seed spacing, seed depth, soil firmness, fertilizer application. Whether you drill or hill-drop, see how the 500 licks the seed-bounce problem! You pick seed opening equipment to fit your crop and soil. Get your corn in right with an A-C 500 Unit Planter!
