Community No. 13 — Strasburg & Paradise Townships: Richard Hess, Lloyd H. Ranck, Ira D. Welk, William Dean, Ivan Bowman Jr.

Community No. 14 — Martic & Providence Townships: Elias E. Frey, J. Fred Shenk, Lester R. Gerhart, Charles A. Ressler, David P. Hess.

USDA Prepares World Poultry Congress Plans

The U. S. Department has begun preparations for the upcoming World Poultry Congress to be held in the Soviet Union, August 15-21, 1966. The first step has been the organization of a Department committee, which will be headed geneticist Steven C. King of the Agricultural Research Service.

Community No. 15 — Drumore & East Drumore Townships: Frank W. Aument, Samuel H. Kreider, John T. Byers, J. Lehman Burkins, Irwin A. Cutler.

Community No. 16 — Fulton, Little Britain & Colerain Townships: John J. Long, W. Lloyd Brabson, Veryl E. Brown, Norman E. Whiteside, Ellis E. Sheetz

Other committee members named were: Hermon I. Miller, Consumer and Marketing Service; Edward Karpoff, Agricultural Stabilization and Conservation Service; Edward C. Miller, Cooperative State Research Service; George B. Rogers, Economic Research Service; Norman G. Paulhus, Foreign Agricultural Service; John J. Scanlan, Farmer Cooperative Service; Woodrow R. Jenkins, Federal Extension Service; and J. H. McCormick, Office of Information.

The World's Poultry Congress is held every four years by the World's Poultry Science Association, which is organized for the international exchange of scientific and technical knowledge regarding poultry production and marketing. Representatives of USDA, land grant institutions, and the U. S. poultry industry will participate. U. S. scientists will present papers on poultry genetics and breeding, nutrition and physiology, disease control, economics and marketing, and related subjects.

U. S. members of the council of the World's Poultry Science Association have set up a Committee under the chairmanship of Dr. Cliff D. Carpenter, to plan for United States participation. The USDA committee will cooperate with that Committee in the complex arrangements necessary to participation in the Congress.

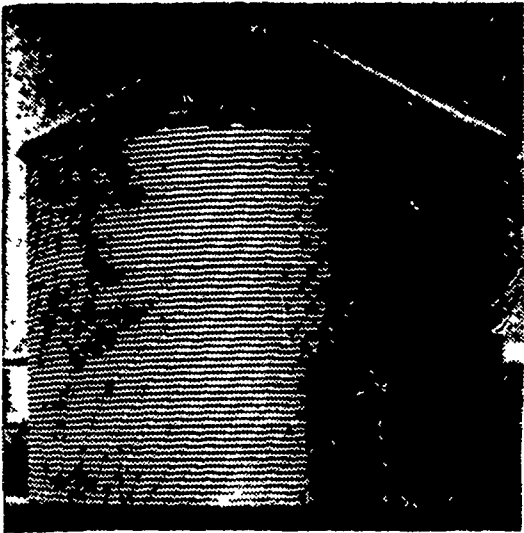

Artificial Breeding

(Continued from Page 1) however, led the other states in number of cows artificially bred—14 million.

Numbers of dairy cows bred artificially—now 41.4 percent—have increased steadily in the United States over the years. In 1964 the total was 73 million, in 1954, it was 51 million and in 1939 (near the beginning of artificial breeding) only about 7,000.

More than one million dairy cows, 15.3 percent of all those bred artificially, were mated to beef bulls in 1964. This reflects an interest by many farmers in "dairy beef."

The newly released figures show the increasing potential of artificial breeding in spreading the genetic contribution of superior sires over a large number of herds. More than 3,000 cows were bred per sire in 1964, compared with less than 2,000 in 1954, and 228 in 1939. A bull mated naturally breeds about 15 to 20 cows per year.

BROCK

DUAL PURPOSE GRAIN BINS For Grain Storage and Drying Brock Quality Is Now In The Grain Bin Field

— 18 MODELS — 18 - 21 - 24 Foot Diameter Bins Capacity From 2200 to 9500 Bushel

Do you know how much milk your cows can really give?

Did you ever hear of a poultryman who gathered his eggs and then decided how much feed to give his hens? Or of a hog man who weighed his pigs and then decided how much feed they ought to get next day?

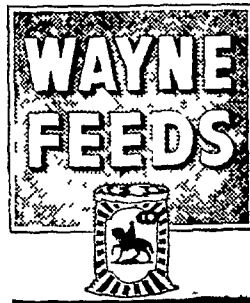

But how many dairymen do you know who weigh Bossy's milk, then decide how much feed to give her?

Doesn't make sense, does it? Wayne's New Concept Dairy Feeding Program does! It leads Bossy into high production with high grain feeding FIRST.

Then you adjust to the most profitable level, after you've learned how much milk Bossy can really give.

More dairymen every day are discovering the advantages of Wayne's New Concept Dairy Feeding Program, how Wayne's high-quality, multi-sourced ingredients pay off in the milk pail.

It works for them — it can work for YOU. Come in and talk it over.
