DISCOVERY OF COAL
The discovery of anthracite coal was an event of tremendous importance to the economic future of early Pennsylvania. Among those credited with this historic "find" was a Pennsylvania German farmer and miller, Philip G'nder. While digging in the mountains for rock to use for a millstone, he came back with a sample of black stone which a blacksmith was able to burn in his forge. His discovery later led to the organization in 1792 of America's first coal mining company, the Lehigh Coal Mine Company.

should be free from seed-stems.

Read Label on Soup Can
Labels on cans of soup tell you what is in the can. The ingredients are listed in decreasing order, according to the amount by weight. The ingredient mentioned first is the one in the largest quantity.

Read the labels to be sure you're getting what you want. Two brands of oyster stew may be similar in composition and have milk as one of the ingredients. But one label may list milk first and

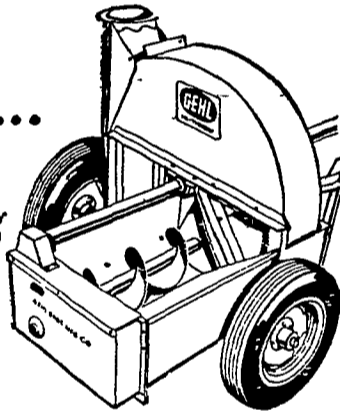

the other oysters first. The label tells you if you're buying more oysters or more milk.

Tomato is the most popular canned soup, then chicken noodle and vegetable, according to the U. S. Department of Agriculture. Other canned soups, in order of preference, are vegetable beef, chicken and rice, cream of mushroom, vegetarian vegetable cream of chicken, chicken vegetable, beef and noodle, chicken gumbo, turkey noodle, beef, minestrone, bean with bacon, clam chowder, cream of celery, green pea, and consomme. Chicken noodle is the most

popular dehydrated soup. What is Monosodium Glutamate?

It's not a tenderizer and it's not a salt. But it is a flavor enhancer that brings out the natural flavor of food without adding flavor of its own. Some seasoning preparations contain monosodium glutamate, but the pure product doesn't add flavor. When using this product, follow directions on the package.

GEHL
Hi-Throw Blower...
fills a 90-footer
without breathing
hard

Power to spare filling a huge 30 x 90-ft. silo! Only time you'll see blower capacity like that is watching a Gehl Hi-Throw Blower in action.

No step-up drive. No smaller blower pipe needed. The Hi-Throw makes efficient use of all the air power it produces to blast the crop high. Tolerances between fan blades and the housing are closely engineered. A simple adjustment maintains them to reduce air loss. Rim sheet adjusts, also, to provide straight-line flow to any storage area. Positive-feeding auger and big throat easily deliver the crop to the fan for ton-a-minute blowing. No unloading slow-downs with a Hi-Throw... even when handling haylage.

Whether you choose the 3-ft. trough, 10-ft. trough or hopper model, with the Gehl Hi-Throw you get power and capacity to fill your silo faster... regardless of size.

Make us Prove it with a Demonstration!

Get the BIG silo unloader value!

VanDale
Delivers more silage faster!

Patented 3-point suspension keeps unloader level at all times and centered for more efficient operation.

• Double auger system digs the silage faster and more evenly under all conditions whether silage is frozen, wet, or dry.

• Exclusive, adjustable drive hub gives more positive traction, keeps the machine operating evenly, and requires less power.

DELIVERS BETTER SILAGE TOO!
The double augers, operating in conjunction with the patented V-paddle impellers, digs the silage, mixes it thoroughly, and then throws it down the chute. Your cows and cattle get good, palatable silage... not a powdered mash as so often happens with unloaders using blowers.

TWO SIZES:
Standard—for silos 18' to 19'
Heavy Duty—for silos 19' to 30'
