Wednesday, Feb. 23, 1966 at 11:30 A.M., Public Sale of Farm Equipment, located one-fourth mile west of Strasburg, Pa. along Lime Valley Road, Lancaster Co. Terms by Chester B. Hess.

Thursday, March 3, 1966, Public Sale of Livestock and Farm Equipment at 12:30 by William B. Smeltz, 1/2 mile East of New Providence, along White Oak Road.

Friday, March 4, 1966 at 10.00 A.M. Public Auction of furniture, machinery, dairy equipment and feed located on Maryland Rt. 24 in Pytesville, Harford County, Md. Terms by Mr. and Mrs. Gaiter Evans.

Saturday, March 5, 1966, Annual Community Farm Sale

by the Bart Twp. Fire Co. Saturday, Feb. 26, 1966, Public Sale of Livestock, Farm Equipment and Household Goods at 11:00 A.M. by David F. High, located 1 mile south of Lititz, 1 mile west of Kissel Hill, 2 1/2 miles northwest of Neffsville in Lancaster County.

Thursday, March 10, 1966, Public Sale of Livestock, Farm Equipment and Household Goods, Hay, Straw, Corn at 11:00 A.M. by Eli and Sadie Esh, located 2 miles west of Christiana along the lower valley road known as the George Shea Farm.

Friday, March 25, 1966, Rocky Knoll Equipment Sale & Cattle Dispersal at the farm, Barner Road, north of Doylestown, Pa., near Fountainville, at 12:30 P.M. Dr. Wm. Y. Lee, owner.

New Alfalfa Varieties Are Now Available

Tomorrow's profitable forage program for Commonwealth farmers will include alfalfa varieties that are high yielding, mature at different times, persist, and, if managed properly, produce a high quality forage, John E. Baylor, extension agronomist at The Pennsylvania State University declared at the Pennsylvania Crop Improvement Association meeting in Harrisburg Tuesday.

Saranac and Cayuga, two new alfalfa varieties, together with two present varieties, Vernal and Narragansett, will meet these requirements, he pointed out.

"Saranac is a wilt resistant alfalfa originating in Northern France, and is similar to Dupuits in vigor and

maturity," Baylor said. "However, because of its resistance to bacterial wilt, it has the potential to persist and remain productive for several years longer than Dupuits. In trials at Cornell University, Saranac and Dupuits were similar in yield the first harvest year. In the fourth harvest year, however, Saranac outyielded Dupuits by 1.5 tons of hay per acre."

He said that Cayuga is wilt resistant and persists well even under intensive cutting management. It flowers later than Dupuits but earlier than Vernal. It is similar to Vernal in yield but recovers more rapidly after each cutting. Compared to Dupuits when harvested on similar dates Cayuga produces a forage that is more digestible, more readily consumed, and is higher in milk production potential.

You Get Efficient Egg Production

when you feed FUL-O-PEP

It takes only a small increase in dozen eggs per ton of feed to make a big increase in profit margin.

For example, suppose you are now producing a dozen eggs on 4 lbs. of feed. If you can save just .3 lb. feed per dozen, you can get an extra 40 dozen eggs from every ton of feed. Top feeding efficiency gives you those extra dozens that mean extra profits.

Ful-O-Pep Egg Feeds are noted for their high efficiency. That's why you'll find some of the nation's most efficient feeders wherever Ful-O-Pep is fed.

BIG J DISTRIBUTOR/UNLOADER

POWER CIRCLE DRIVE works when others stop ...even in frozen silage

Rock-hard, solid-packed silage leveled from wall to wall... that's what you get with the Big J Power Circle Drive that doesn't depend on silage surface for traction. Tough, steel auger knives level cut through hard-packed or frozen silage with under and up action. Slip clutch slows forward motion so auger can chew its way through hard stuff - moves forward as need be.

3-Point Suspension - full support that keeps the unloader level at all times, lowers it evenly. As a result, it can't tilt or ride over when the going gets tough... can't burrow into fluffy new silage, high moisture corn or low-moisture grass silage. Can't stall or cause spoilage. And, you can unload right after filling.
