Serving farmers with finest quality seeds since 1899

The Story Behind . . .

## HPS FORMULAS

As farming has become more competitive, and profit margins have dwindled, farmers have had to aim for ever higher returns from grassland acreage, just as they have on cultivated crops. This need for greater productivity resulted in Hoffman HPS Formulas.

Hoffman has, for years, been a leader in introducing new, heavier producing varieties of alfalfas, clovers and grasses. These "straight" items continue to be important staples in the Hoffman line.

We began to find, however, an increasing call for combinations of grasses and legumes to meet specific situations. Our attention was then focused on the scientific formulation of such combinations. The end result was the Hoffman HPS Formulas — for more profitable yields of Hay/Pasture/Silage.

In arriving at specific HPS formulations, we considered the recommendations of Experiment Stations in the states in the Hoffman selling area. We studied the preferences of our customers over the years, and the results they achieved. Field tests were studied.

Each new bit of evidence was carefully evaluated. Out of this broad program of research and practical on-farm results came Hoffman HPS Formulas — each designed to do an outstanding job in meeting a specific need.
