GOOD THOUGHT!
Be proud of your ancestors, but before you boast of their great lives, would they, in turn, be proud of you?

DHIA Short Course Set For May 2-13

The Pennsylvania State University recently announced the scheduling of a D.H.I.A. Supervisors Short Course for May 2 to May 13, 1966. The two week course, offered on the University Campus, is designed to train technicians for jobs with Dairy Herd Improvement Associations in the state. Enrollees will be trained in testing milk for butterfat and keeping accurate dairy records.

For admission to the short course, applicants must be able to handle figures accurately. To determine their skill in this, they must satisfactorily complete an entrance test in mathematics at the County Agricultural Extension office, prior to enrollment in the course.

A number of Associations in the state report vacancies in Pennsylvania last year and are seeking graduates for employment.

The average farm size in the nation in 1965 was 350 acres, compared to an average of 285 acres in 1959, according to the U. S. Department of Agriculture. Farms in Pennsylvania last year averaged 135 acres.

YOU CAN BANK ON WAYNE

Here's why. The Wayne Pullet Feeding program economically grows chicks into vigorous pullets. Their bred-in production capacity is fully developed. You get large and early-laying eggs earlier, have less prolapse and improved fertility. For instance, in Illinois, Raymond Paukat lost 2 birds from 4,342 chicks started, had a feed cost of 47.1c at 16 weeks of 47.1c. North Carolina, S. A. Sr., started 5,100 chicks, livability 93.5% at 16 weeks, net feed cost per pullet, 74c. Iowa, Spencer, started 2,200 chicks, feed cost per pullet at 16 weeks, 42.6c, mortality less than 4%. You, too, can bank on the research to bring you the newest, proven development in poultry nutrition of all times. You get more for your money with the Wayne PULPET PROGRAM.
