

FEED IS AUGERED to these steers with a mini-

mum of investment in equipment. Two loads of silage are hauled from the trench silo each day in a spreader.

THESE FOUR YOUNG HEIFERS were sold to a breeder in Tennessee and are shown above waiting for the truck that would carry them south. L. F. Photo

ities throughout the foods in- end of the gate The speed dustries, he says, from the the incleased by moving supervision and control of quality in food manufacturing to the management of food businesses. Peisons with advanced training are in demand in iesearch and development positions, and in top management, he adds. A strong demand also exists for food technologists in government food regulatory agencies and with chemical companies, packaging firms, and other allied industries.

Head of the department of dairy science since 1948, Josephson received the Borden Award in chemistry in 1954, as sponsored by the American Chemical Society, for outstanding research achievements in the chemistry of milk.

• Now Is The Time ntinueu from Pag th will be encouraged and the weeds will not have a chance to go to seed After heavy grazing on an area, the clipping practice is recommended to get more uniform aftermath growth Good pasture management requires regular clipping during the grazing season,
