Potatoes are for cookin'— not for cullin'

DITHANE M-45 controls early and late blights—the most serious threats to quality and productivity in potatoes. DITHANE® M-45 is unlike any other potato fungicide you can buy. Its unique, new formulation combines zinc, manganese and di-thiocarbamates into one powerful blight fighter. This superior fungicide is effective under severe conditions such as high humidity caused by the weather or by irrigation. DITHANE M-45 protects foliage tenaciously, an ability of critical importance if rainy weather should delay your spray program.

Ask your dealer for DITHANE M-45. It is tough on blight fungi but gentle on foliage. Use DITHANE M-45 on your potatoes all season and get the best available blight control fungicide on the market today.

"Dad says it's like baling money, so he got the best!"

Get big capacity and top quality with an Allis-Chalmers 303 Hay Baler!

The 303's wide 60" pickup handles light or heavy windrows—cleans the field! Twin-feed rakes move hay evenly into the baling chamber, comb out wads, to form tight, square bales. Grooves are formed on the bale to minimize twine or wire slippage. See the 303 and the complete line of A-C tools for haying!
