

## MILK PRODUCERS

# Here Is Why It Pays To Use GREEN PASTURES Nutro-Sweet

1. A Dairy Feed Product developed by our Nutrition Department to aid in maintaining milk production when roughage quality goes down.
2. It **ECONOMICALLY** replaces the nutrients you are missing when your pasture suffers from the dry weather.
3. **VITAMIN A IS ALL IMPORTANT**  
So is Vitamin D. NUTRO-SWEET adequately replaces these essential vitamins which will not be found in a dry stemmy pasture or poor quality hay.
4. **MINERALS**, especially phosphorous normally found in good roughage now supplied by NUTRO-SWEET.
5. In Short NUTRO-SWEET is a very economical source of nutrients.
6. A good top feed for heavier producers or show animals.
7. Cows really enjoy its bulky course texture.
8. Nutro-Sweet is palatable and a good appetite stimulant.
9. Saves hay for winter feeding.
10. Economical to use — saves money — 4 lbs. Nutro-Sweet equal to 6 lbs. of top quality hay or 8-10 lbs. good quality roughage.

For better returns per feed dollar contact any Miller & Bushong Service Representative for an appointment with our Dairy Specialist, or call us direct at Lancaster 392-2145.

● **Milk Price**  
(Continued from Page 1)  
sey, Delaware Valley and Upper Chesapeake Bay milk marketing areas.

In the New York order, for example, the change would result in an increase to dairy farmers of 22 cents a hundred-weight over the price that had been expected in the milkshed over the next few months.

For the rest of the year the increase will be from 50 to 60 cents a hundred pounds of milk marketed.

Milk production has been running about 5 percent below a year ago largely because many farmers had been quitting dairying.

In announcing the new increase in supports, Freeman said the government sought to avert a "dangerously tight supply situation and to reverse trends in the dairy industry which have seen dairy farm-

ers leaving the farm at an alarming rate at the same time that cows are being slaughtered at record volume."

### WATER BEDDING PLANTS

Many bedding plants can be planted outside now, but A. O. Rasmussen, Penn State extension ornamental specialist, urges watering these plants well both before and after transplanting. By applying a starter solution at the time of transplanting, the plants will better withstand the shock of transplanting. Continue to water for a few days until the plants are established. Apply a mulch just as soon as the plants are established and signs of new growth are evident, adds Rasmussen.

If you stand for nothing, you'll fall for anything.

If flies are about to drive your cattle crazy,  
then you better see us fast for

## ORTHO DIBROM 1% Fly Spray

If you're sick and tired of fooling around with weak, half-hearted fly sprays, then you're ready for DIBROM. Minutes after you spray, every fly that's been hit will be dead or dying. When DIBROM hits 'em, they stay hit. Even if they're resistant to other sprays.

DIBROM is registered to spray over and around cattle. In fact, Dibrom in emulsified form is even safe to spray on food crops, up to four days of harvest.

It's easy to use, comes to you ready-mixed and gives you real economy. Sure, it costs a little more than your pyrethrin sprays, but you'll find that it gives a lot better kill. So when all is said and done you wind up getting back a lot more of the money that flies have been costing you in reduced milk and meat production.

Come in and see us . . . we'll be glad to show you how to go after flies like you mean it . . . with ORTHO DIBROM.

T. M. Reg. U. S. Pat. Off.: Ortho, Dibrom. On all Chemicals, Read Directions and Cautions Before Use.
