

# 4 - H NEWS Local Representatives Attend Oliver Program

## WILDLIFE CLUB TOURS ATOMIC POWER PLANT

by Annette Long, reporter  
Members of the Lancaster County 4-H Wildlife Club their parents and friends went on a group tour to the Peach Bottom Atomic Power Station. President Michael Hosler called a short business meeting to discuss the 4-H Cookie Sale which will take place October 1-22. On the return trip, Indian Steps Museum was visited where Indian Artifacts and mounted animals and birds are on display.

The next meeting will be a hike at Camp Andrews, October 16.

Nelson H. Hershey, manager, and Galen W. Hosler, service manager, of N. G. Hershey and Son, Inc., Oliver farm and industrial equipment dealer at Manheim, attended Oliver Corporation's 1966 Growing "O" Program at Mason City and Charles City, Iowa, August 25-27.

New agricultural machinery for the coming fall, winter, and spring seasons was introduced and demonstrated under competitive field operating conditions. Oliver dealers from throughout the United States were flown by chartered airliners into central Iowa in groups of 400 to witness each of the six, two-day programs presented back-to-back during a 13-day period.

## Area Holsteins

(Continued from Page 1)  
1342856 (EX), owned by Ira Hicks, West Chester, and John M. Umble, Atglen. His 15 daughters averaged 15,209 lbs. milk and 609 lbs. butterfat. The award is based on the production of a bull's registered daughters on official tests as compared with that of their dams and with the production level of the entire Holstein breed.

At least 10 pairs of daughters and dams must figure in the comparisons with the daughters having a total of at least 15 official production records in the Advanced Registry, Herd Improvement Registry, or Dairy Herd Improvement Registry testing program.

## NEPPCO

(Continued from Page 1)  
question and answer session during which poultrymen in the audience will be able to examine points made by the panelists.

Phase feeding is relatively new and often misunderstood, the experts note. Although its proponents claim that it can be a major aid in increasing production and maintaining health, they caution that an improperly used phase feeding program can prove costly and may even result in lower production.

Because phase feeding is complicated and can even be difficult for those unfamiliar with the program, it is expected that this segment of the NEPPCO Exposition will be among the most popular with poultrymen expected to attend from all sections of the 14-state NEPPCOI and area.

## ASCS

(Continued from Page 1)  
November 30th is the deadline for completing practices under 1966 ACP. Farmers who have completed their practices should complete Form ACP-245 and return it to the county office with a copy of bills for material used. Miss Neel said.

## Solve RUST PROBLEM

Modern science has caused iron rust to become less of a problem in our water supplies. Henry Wooding, extension agricultural engineer at The Pennsylvania State University, says that plastic pipe is a good replacement for badly corroded or rusty metal pipe, and it can be installed rather easily.

## Lancaster

## DAIRYMEN-CATTLEMEN

Here's the answer to your MANURE PROBLEMS

EASY WAY  
MANURE DISPOSAL  
SYSTEM

Saves Time—Saves Fertility

Just scrape or wash manure, bedding waste and feed into Easy Way holding tank. When you're ready, the powerful agitator and self-priming chopper impeller pump will put the homogenized mixture into Easy Way liquid field spreader. No clog — no mess — no stink

For complete information on the

EASY WAY DISPOSAL SYSTEM write to:

# CALEB M. WENGER

R. D. 1, Drumore Center K18-2116, QUARRYVILLE, PA.

These well-finished steers are part of the 132 steers which Elam Z. and Noah W. Wenger, R. D. 1, Stevens, Pennsylvania finished out to a 1222-pound average. Twenty-two of the top steers were marketed at the local auction at \$27.53 average, top steer scaled at 1365 pounds and brought \$28.50. The remaining 110 steers were sold to a packing company and yielded 64.03% cold dressed. These steers dressed slightly higher than the previous lot Wenger finished out, which dressed out at 63.15%.

Wenger contributes the quality finish of his steers to the HARVESTORE processed Alfalfa Haylage and Dry Corn Silage or Cornlage. When Alfalfa Haylage was fed, no additional protein supplement was fed; however, when Cornlage was fed, limited amounts of protein supplement were added but never more than two pounds per steer per day. Because of the high nutritive value of the HARVESTORE processed Cornlage and Haylage, Wenger's average daily gains were better than two pounds per day on the 548-pound steers. The majority of Wenger's feed was processed through his 20' x 60' HARVESTORE HARVESTORE processing gave him a return of 740 pounds of beef per acre. — Adv.
