What makes this little pellet your big milk producer?

First, Agway's Nu-Milkerpels 16 is 100% pelleted. This saves you time and labor, because the pellets flow freely in bulk bins and automated systems.

Full pelleting also allows Agway to use lower-cost (yet high milk-producing) ingredients than the ingredients which must be used in making a natural-textured feed. This

> lowers the cost per unit of energy or TDN in Nu-Milkerpels—which is reflected in its price to you.

Nu-Milkerpels contain urea as a protein source. Why? Urea makes high-quality protein quickly available in the cow's rumen. She makes more milk-and research indicates urea aids in the digestion of fiber in the ration.

Nu-Milkerpels use lignin sulfate as the pellet binder. This organic material, unlike the inert clay in many pellets, actually adds feeding value to the pellet-about \$1.50 worth per ton.

Agway puts into this pellet everything that is known on the subject of how to make a dairy pellet profitable for you. Test this statement. Compare Nu-Milkerpels' 75 therms of milk-making energy, and its price, against the energy and price of your present dairy ration.

Then put these economic facts to work for you. Order Nu-Milkerpels 16. Agway Inc.
