

**Agr. Tech. Training
Program At PSU Offers
Good Job Future**

Applications are now being received for admission to the Technician Training Programs of the College of Agriculture, Penn State University, according to Short Course Director Fred C. Snyder.

These training programs are in four different areas: Farm Equipment Service and Sales, Ornamental Nursery Management, Pest Control Technicians, and Turfgrass Management.

The training programs consist of two, eight-week terms a year in each of two years, or a total of 32 weeks in the classroom and laboratory. The six-month summer period between the second and third terms is utilized for on-the-job training.

The average starting salary of graduates is \$5,300 per year with graduates receiving from three to seven job offers each.

High school graduates are eligible for admission. Non-graduates are accepted if they are over 21 years of age and have had prior experience in the area of their interest. Turfgrass Management applicants must have had experience in golf course maintenance.

125 Years Ago...

John Eshelman — a 26-year old Lancaster County farmer may have been thinking about tall oaks when he decided one day in 1842 to grind grain for his neighbors and friends in an abandoned gun factory. Now — his "acorn" has grown into a feed business which serves livestock and poultry producers in 22 states and 39 foreign countries. Under the familiar RED ROSE trade mark, feeds are manufactured by John W. Eshelman & Sons at six plants and sold through some 1,200 independent feed dealers.

Most farmers 125 years ago farmed in a pretty primitive manner — depending on nature, luck, hunches and hearsay to make their crops, animals and birds productive. Each farm was a self-sufficient unit. The scientific feeding and balanced rations being used now were unheard of and there were no production standards to follow. Then, a bushel of wheat brought \$1.22; a bushel of corn was 55c, and oats were 42c a bushel.

The discovery of the vitamins and their importance to nutrition opened up a new chapter of investigation in the formulation of feeds for farm animals. From 1913 (when vitamin A was definitely placed as to nutritional value) down to the present day, the whole subject of vitamins has been given thorough and exhaustive study — all for the benefit of Red Rose feeders.

Getting your animals started right and feeding them right has been our only business. Our goal has always been to help you achieve better production for smaller investments. We find nutrition answers in our research laboratories, and prove them on our working farms. In our business . . . as on your farm . . . there is no time when we can stop and say "This is the end." We will always keep pace with the advances in scientific feeding of farm animals — and as

new discoveries are made, Red Rose will quickly put them to work.

There have been many changes in the Eshelman company in the past century and a quarter. There will be many changes in the years ahead. But one thing will never change: the tradition of serving friends and neighbors in a fair and straightforward manner.

The Symbol of Good Feeding
