

## Hail Hits Hard In New Holland Section This Week

Particularly hard hit in this week's freak hail storm were corn, tobacco, and potatoes in a belt approximately 1 to 1½ miles wide, running from just north of New Holland towards Terre Hill.

According to Harry Fox, New Holland R1, whose farm seemed to be about at the center of damage, the cherry-sized hailstones were borne in on a hard rainstorm from the southwest Monday afternoon. Corn on the Fox farm, shown at left by young Elam Fox, had its leaves slashed into ribbons with many stalks broken. This crop will likely recover, but some younger crops were set back substantially.

At right is a closeup view of a tobacco plant in the same area. This tobacco was recently topped, and had been growing better than most tobacco plants since 1961. Not only are the leaves on the plants in this field completely "punched out", but most of the ribs and stalks are also smashed. Some younger plants in the area may come back all right, but this crop looks like a complete loss.

The home vegetable garden on the Fox farm was flattened

### Tindall Cow Has 1/2-Ton Fat Record 3rd Time

Another official production record exceeding a half ton of butterfat has been completed by Pleasant Grove Lucinda Dean (GP), a registered Hol-

stein cow owned by Charles C. Tindall, Peach Bottom. This is the third time that "Lucinda" has achieved the 1,000 lb. butterfat production level in a single lactation. This record ranks among 2,319 similarly completed by Registered

Holstein cows on official test. The Pennsylvania Holstein's official record of production totaled 23,881 lbs. of milk and 1,021 lbs. of butterfat in 365 days. She started her lactation at the age of nine years and three months and was milked two times daily.

to such an extent it was difficult to tell tomato from squash age has not been completely determined, it will undoubtedly run into many thousands of dollars in lost crops and income.

### BRANDON SILOS

To afford the unequalled Brandon 10-year guarantee for today's larger diameter silos, the Brandon Silo Corporation has engineered a new larger and heavier "Sine-Wave" corrugated stave. The new Brandon corrugated stave is the most perfect and durable silo stave that is possible to make.

Lasting beauty incurred in the new "Sine-Wave" corrugated stave by the incorporating of a special blend cement. It is unnecessary to "White-Coat" the silo for appearance. Your new Brandon silo will be distinguished and permanent.

# TEN TON ALFALFA

## IN THE FUTURE? WE ARE THERE NOW!

Higher Yielding

## FLANDRIA BRAND FLAMANDE ALFALFA

FLANDRIA Brand ALFALFA yielded 9.73 ton per acre at Huntley, Montana in 1963 in official trials.

The average yield in Pennsylvania is a little over 3 tons.

Can our Pennsylvania Farmers afford not to use this high yield, high protein, high vigor Alfalfa?
