

THE NEW HOLLAND SALES STABLES ANNUAL COW SHOW AND SALE. The ten top cows in the annual Holstein show and sale at the New Holland Sales Stables had a grand average of \$1,186 according to Abe Diffenbach, Sales Manager.

The grand champion shown by Marvin Eshleman, Strasburg, was sold in the afternoon sale to Charles C. My-

ers, 1500 Rohrerstown Rd., for \$1,675.

The second place animal shown by Norman Kolb, 355 Pitney Rd. sold to Paul Zimmerman, Ephrata. The selling price was \$1,200.

Melvin Kolb, 621 Willow Rd. and Marvin Eshleman sold the third place cow for \$1,300 to Donald Hostetter.

The top 100-head averaged 627 dollars.

● **Have You Heard?**

(Continued from Page 11)

should list the fiber content along with directions for care. Be sure to note whether the fabric can be laundered or must be drycleaned.

Check whether allowance must be made for shrinkage.

**Tips on Making Dried Flower Arrangements**

When making dried flower arrangements, keep containers natural. They may be a slab of wood, a brick, or an earthenware container. Try to express the feeling of autumn, the casualness of a "design of nature." Or you can use fall vegetables arranged in a market basket. Try for the feeling of an abundant market place.

Some materials you can use for fall arrangements include —Grasses—fountain, pampas, timothy.

—Grains—barley, field corn, oats, rye, wheat, sorghum.

—Berries—barberry, bayberry, black alder, bittersweet.

—Vegetables—artichokes, red onions, hot peppers, gourds, purple-top turnips, purple cabbage.

**When You Buy Ham...**

To get the most for your money when buying a ham, buy it either whole or by the half. That way you'll get those meaty center slices. A "ham half" must be exactly that. A piece of ham labeled butt or shank end or portion means the butcher has removed the

**Lanchester Pony Club**

At a meeting of the executive committee of the Lanchester Pony club recently, it was decided that a one day Rally be on the John M Gibson property, Drumore R1, today, Saturday, October 28, according to John E. Waters, president, Executive Committee.

An invitation is being extended to Brandywine Pony Club and to the Berks Pony Club to participate in this rally which will consist of three main phases of horsemanship, namely, Cross-country riding, Dressage and Stadium Jumping. Individual riders will be scored on their performance in all three phases.

The Club's newly acquired headquarters at the Gibson farm have been improved by the club members by erecting a 150'x300' training ring, the building of a 1½-mile, 15-jump cross-country course and the erection of two 66'x132' permanent dressage rings. The club invites interested area residents to see the members perform at their headquarters the day of the rally. Gibson's farm is located south of the Susquehannock State Park on the road to Fishing Creek, follow the signs.

center slices — and probably sold them separately for more money.

# Steer Feeders

## PROBLEMS ASSOCIATED WITH CATTLE GOING ON FEED

Digestive disorders and a slight transient depression in appetite in newly-arrived cattle in the feedlot have been problems for a number of years. There are numerous causes:

1. The sudden change in type of feed, for example, from grass and milk to grain, silage and/or hay and a protein supplement.
2. Too rapid pushing of grain concentrates.
3. Too much protein
4. Not enough roughage.
5. Too much high quality roughage.
6. Unpalatable feed.
7. Too much green chopped legume or grass silage.
8. Feeding soft or immature corn. If not moldy, soft corn is satisfactory, but animals must be accustomed to it gradually (Morrison).

9. Too much green chopped corn causing green corn poisoning.
10. Too much silage fed to lighter weight calves. Calves do not have the digestive capacity to obtain their total digestible nutrients from a full feed of silage alone.
11. Digestive disorders caused by infections.
12. In addition, in connection with supplements containing an antibiotic, there is an adjustment of the rumen microflora to the antibiotic. This may cause a slight depression in rumen function and reduce appetite for 24 to 36 hours after the initial feeding. Softer feces also may be noticed. This effect is transient and after 36 to 48 hours the appetite should be restored to normal.
