(Ed. Note: This background conditions in the past and feed to heavy weights

Such feeding to heavy weights usually is a false economy for the cattlemen, and cre-

Cost of gains go up sharply as livestock are fed to heavier weights Many livestock feeders are not aware of how much expansion in production of these additional pounds really cost them.

\* Plentiful supplies of feed Both Feed and Other Costs Increase for Larger Animals

Data published by the Comrespond as they have to similar mittee on Animal Nutrition of the National Research Council show a substantial drop in the feed conversion efficiency for a yearling steer in a feedlot as the weight increases past 1000 pounds In addition, the nonfeed costs such as death loss labor, overhead, etc. averages markedly higher per pound of gain for each additional pound of gain put on heavier animals.
