College Aid Is Available

Most scholarship assistance today is based upon need rather than upon scholastic achievement. There should not be any reason for a student with college of his choice according to Robert Fleming, Representative of Higher Education Assistance Agency, with offices in the Farm and Home center.

If today's high school student takes college boards in March or May of his Junior year in high school and achieves a total score of 800 or more, he will be mailed an application for financial assistance by the Pennsylvania Higher Education Assistance Agency. Students should take the college boards whether they plan to attend college in the future, or not.

Will Receive Aid

If he files his application by November 1 of his Senior year in high school and has need as determined by the agency, the student will receive financial assistance to attend the school of his choice.

Should an applicant be rejected for having no need, he would retain residual rights for the duration of his time in school. This means that should the financial picture change, he would then be eligible for financial assistance.

To comply with the current scholarship law, the student must be enrolled in college no later than September or January following his June graduation.

Help College Students

Students currently attending college who have never filed a prior application may apply for financial assistance by writing to the agency for an application and applying between April 1 and June 30 preceding the year they are seeking assistance. They should consult with their local high school counselor or college financial aid officer.

Those high school students who intend to pursue nondegree programs at business, trade, or technical schools, and those planning to attend nursing schools should either write to the agency or secure an application from their school counselor.

Forests And Waters Department Looking For Old Trees

Have an old, huge tree in your backyard, perhaps along the curb or down in the meadow?

If so, it may be a champion, the type of "Tree Monarch" sought by the Pennsylvania Forestry Assn Big Trees of Pennsylvania Committee, in cooperation with the Department of Forests and Waters, for eventual compilation in booklet form.

Pennsylvanians have been reporting unusually large specimens of various tree species and varieties since 1886, but this new effort at locating "Tree Monarchs" represents an organized venture by a committee made up of qualified members from various sections of the Commonwealth.

Factors taken into consideration in nominating potential Pennsylvania Tree Champions include circumference measured at 4½ feet from the ground; height, average width of the crown, specific location, species and year reported.

Nominations may be made to Albert B. Mickalitis, committee chairman, of the Department of Forests and Waters, Box 1467, Education Bldg., Harrisburg.
