off amount 1/10 of 1% of which is forwarded to the Pennsylvania Pork Producers Council where 90% will be deducted to carry on the state program and the remaining 10% will be forwarded to the National Pork Producers Council to support their program. Feeder pig producers are asked to contribute 2c per pig sold.

"You should give serious consideration to this program as it is the first concentrated self help program on an industry-wide basis to promote your product and support research work to improve your efficiency. Success depends on the ground roots of the swine industry, you the swine producer; and faith of this voluntary pork promotion could initiate a referendum and a mandatory program, an involuntary and more costly means to achieve the same goal.

"Nickels obtained already by the National Pork Producers Council have been put to use in production research, farm-level production, trichinosis eradication, consumer surveys, advertising, and expanded National Meat Board programs. Nickel deductions have now passed the three million hog level nationally and over twenty thousand in Pennsylvania.

"Several local market buying places are cooperating in the program. Deductions can be made just by ASKING these buyers to withdraw it and the money will be forwarded to the Pennsylvania Pork Producers Council. No matter the size of your operation, ten hogs or one thousand, your contribution will be a determining factor in the future of swine business."

The letter was signed by John Henkel president; Mark Nestle- roth, vice president and Jim Horton, secretary-treasurer.

Total head shown was 150 head

Swift Ship

The fastest time ever recorded for a day's run by a sailing ship is said to have been made by the American Clipper ship "Lightning" in 1854 when it covered 437 miles in 24 hours.

EGG PRODUCERS:

PERFORMANCE

IS THE KEY TO LOW COSTS!

Here are the to date results averaged from three flocks still in production on the EARLY BIRD PROGRAM.

No. Hens Housed	55,000
Ave. Age Records Started	20 weeks
Eggs Per Hen Housed	230
Feed Conversion	3.82
Months in Production	12

Projected production in these flocks for 14 months is 260 eggs per hen housed.

Here is an unusually good record not included in the above three lots. It shows what you can get out of EARLY BIRD FEED if management and birds are close to perfect.

No. Hens Housed	6,870
Age at Housing (7/6/67)	21 weeks
Eggs per Hen Housed	275
Feed Conversion	3.51
Months in Production	12

THESE BIRDS ARE STILL GOING STRONG.

THERE IS A DIFFERENCE

EARLY BIRD optimum performance feeds will give you just that.

**Optimum Performance Better Quality
Better Egg Size Lower Costs**
