Doing A
Good Job Of
Farming

It's a great feeling to know that you are the master of your farmlands ... that when you treat your soil right, it will treat you right. Liming is one of the most important factors in keeping your soil in the highest productive range. By raising the pH from a level below 6.0 to 6.5 or higher, you can expect to harvest as much as 5 more bushels of corn per acre, with similar increases for all other forage and cash crops.
