

Tractor Storage Tips

If you're planning to put your tractor in storage for the winter months, it's best to take some precautions. Champion Spark Plug Company offers some helpful storage hints to assure good performance next year.

1. Start the engine and let it warm up thoroughly. Then drain the oil from the crankcase. Drop the crankcase pan to remove accumulated sludge. After reassembling the crankcase, fill it with new oil. Let the engine run again for a few minutes to allow the new oil to coat the engine parts.

2. Drain all but a little fuel from the tank. Then, start the engine and let it run until all fuel is consumed. This procedure is recommended because fuel left in the tank of an idle tractor can form harmful gum deposits in the carburetor and fuel line.

3. Open all drain cocks, including the cylinder block drain plugs, to drain the cooling system. Flush the radiator with a quality radiator cleaner. Leave the drain cocks and drain plugs open.

4. Check the spark plugs. If they have been used about 250 hours or appear worn, replace them. If they need only service, file the electrodes until they are flat and have sharp edges. Regap the plugs to specifications and clean off any moisture or dirt. Before reinstalling or putting in new plugs, do this: pour in two or three teaspoons of No. 30 or heavier motor oil into each spark plug port. Then turn the engine over several times to distribute the oil over the cylinder walls and to prevent rust.

5. Remove debris from the exhaust pipe, crankcase fill pipe and crankcase vent pipe. Seal these openings with tape or household plastic film. Also, remove the air cleaner and seal the carburetor intake opening. Wrap plastic film around such engine components as the generator (alternator), distributor, starter and coil. Secure the film with tape for moisture protection.

6. Service the oil cleaner according to specifications for its type. Remove the air cleaner, service it and store.

7. Remove any ballast from the tires. If you are equipped with sturdy jacks, elevate the tractor on blocks to help preserve the tires. Otherwise, maintain about 10 percent extra air pressure in the tires throughout storage.

8. Store the battery in a cool, dry place, maintaining the charge while in storage. Clean the cables, terminal posts, casing and mountings.

Store the tractor in a dry, well protected area. If no such area

is available, drape the tractor with a tarpaulin or plastic covering.

LANCHESTER PONY CLUB

Nine members of the Lancaster Pony Club competed in a United States Combined Training Event in Fair Hill, Md. on Sept. 21 and 22.

Competing with people from Mass., Virginia, New York, New Jersey, Delaware, Maryland and

Pa. The following won honors: Jumping was Patti Hassler riding Typically English, Sixth was Mary Beth Little from Camargo was third in the Jr. Dressage Phase, and Pat Graver from New Providence was first in the Sr. Dressage Phase.

These children should be complimented on their success at a National Competition of Roads and Tracks, and Stadium Twenty Top Quality Riders.

Fifth in the entire competition of Dressage, Cross Country, Roads and Tracks, and Stadium

MT. HOPE VIEW Complete Holstein DISPERSAL

Leave turnpike at Lancaster-Lebanon interchange, go south 1/4 mile to Ciderpress Road, follow for 3 miles to intersection of Shuemaker Road.

Also 5 mile north of Manheim along Shumaker Road.
