INSTANT HEAT!
Powerful 150,000 BTU
Reddy Heater

with
automatic
shut-off control for
unattended operation

The answer for farmers, building tradesmen, businesses, outside contractors—anyone who needs high-volume portable heat around the clock. Safety control automatically stops motor, fan and fuel supply if operating conditions warrant. Runs over 13 1/2 hours on one tank of low-cost kerosene. Has built-in thermostat. Mounted on big rubber-tire wheels for easy maneuvering. Ask us for demonstration.

REDDY HEATER

**Rat Population
Equals Number
Of U.S. Humans**

Rats are dangerous to man and extremely wasteful. Not only do rats eat a significant amount of stored food and grain (over an ounce and half a day per rat), but they also make more grain unfit for human consumption, by fouling it.

If they do not eat it or foul it, they often gnaw holes in sacks and storage containers and cause food grains to be lost by spillage.

Rats must gnaw to live. Even when not eating, a rat must continually use his front teeth, wearing them away as he grows. If not worn down, the front teeth grow long and impair the rat's ability to eat, and he will starve. Much damage to doors, walls, furniture, and household appliances results from the rat's gnawing activities.

Rats will eat anything a man can eat, and a few things man couldn't and wouldn't. Our garbage for example provides a rat with a dinner fit for a king.

Fires have been started by rats by gnawing on live wires or on matches.

Rats bite children and have occasionally caused their deaths. Over 14,000 people are bitten by rats each year in the United States. Small domestic animals, particularly poultry, are often attacked and killed by rats.

In the cities there is about one rat for every two people. In small towns, there is a rat per person and the rat population on farms is double the human population. The total number of rats in the U.S. is about equal to the human population—about 200 million rats.

Losses in this country due to rats are over one billion dollars each year.

**American Heart Assn.
Gets Rapped For
Cholesterol Stand**

The National Livestock Meat Board President, David Stroud, has taken American Heart Assn. to task for its stand on diet-heart disease. Singled out especially comments by Dr. Jeremiah Stamler made at AHA meeting in Miami recently. Dr. Stamler, of Chicago Board of Health, is leading proponent of substituting vegetable oils and fats in diet for animal fats. Following is summarization of Stroud's statement, issued to media.

Dr. Stamler has accused Food and Drug Administration of being "unscientific, unrealistic, harsh and archaic" for not jumping on AHA bandwagon regarding dietary recommendations. Rather it is AHA which has taken an alarmingly unscientific position. Without valid research data, other than much statistically concluded information, Dr. Stamler and Heart Assn. would have the entire American public change its meat-eating habits.

They have inadvertently or intentionally encouraged some manufacturers to make unwarranted, misleading health claims for food products containing polyunsaturated fats/oils. AHA endangering its otherwise respected reputation as scientific organization, by giving medical advice based on procedures which are unproven. Quacks and faddists follow the same pattern.

Implausible as it seems, it appears AHA is attempting an experimental diet program using the entire 200 million people of the U.S. as its guinea pigs.

Food and Drug Administration demands valid clinical and laboratory evidence before making or approving diet recommendation for the general public. This insistence on adherence to professional standards seems to be a basis for Dr. Stamler's charge that FDA is "archaic and unrealistic." The FDA's position is based on recommendations of

the renowned Food and Nutrition Board of the National Research Council of the American Academy of Sciences.

The industry of animal agriculture shares the fervor of the physician in wanting Americans to eat sound, basic, correct diet. We want the answers to causes of heart disease every as much as does AHA. And we can, through breeding and processing, bring public the product it wants, as well as needs.

Most medical men agree that in general American public overeats, has overweight problems and poor eating habits. We don't get enough exercise and smoke too much. Many medical authorities see these factors as clearly responsible for heart disease rather than the unproven "cholesterol theory."

His Full Name

Rudolph Valentino, the popular screen idol whose funeral in 1926 attracted a crowd 11 blocks long, had a name almost as long. He was born Rodolpho Alfonso Raffaello Pierre Filibert Guglielmi Di Valentina d'Antongio.

PIONEER OF BETTER IDEAS IN SILO UNLOADING

**A 2-foot diameter
impeller isn't the
only reason you'll
feed cattle faster
with a Van Dale
silo unloader**

**HERE'S
ANOTHER...**

pioneered by Van Dale back in 1957... the heftier cast iron swinging V-paddles. They give the impeller more unloading capacity. Each 6 lb. V-paddle is weighed, matched, and balanced, then pre-run for more dependable performance. And then there's the solid-weld construction of the heavier gauge impeller housing for longer life in the silo... and the biggest impeller throat... and there are many more reasons that contribute to Van Dale's superior capacity and reliability in addition to the impeller... like the double augers and the... But why not let us tell you about them. We'll be happy to drop by to see you at your convenience.
