NEWER SEEDING PRACTICES IMPROVE FORAGE YIELDS

HARRISBURG — Research conducted at Penn State has proven that good stands of legumes are possible even under unfavorable conditions if certain practices are carried out, an extension agronomist told members attending the annual meeting of the Pennsylvania Crop Improvement Association at the 53rd Farm Show.

Dr. John E. Baylor pointed out that excellent stands were established in trials by band seeding in the spring on a well-

A View From The Governor's Office

By Gov. Raymond P. Shafer

This month, Pennsylvania, along with the entire nation, moves into the last year of the 1960s — a tragic, turbulent, yet one of the most exciting decades in the history of mankind.

War, riot, social and scientific revolution, combined with rising costs and rising expectations, have brought fatigue to the spirits of some and anger to the hearts and minds of others.

Yet, we have flown to the moon, incredulously, with Borman, Lovell and Anders, in a demonstration of scientific perfection that puts our earthly human imperfections to shame.

Nevertheless, around the world, this moon voyage sent men's hope soaring and gave them reason to believe anew in their ability to solve their problems, and to discover and create something better in the eternal search for a good life.

The challenges of the 1970s will be awesome and confusing, but inspiring if all of us have the will and determination to make the effort.

New technology will help us unfold the mysteries of space in

prepared seedbed and using a packer-wheel drill or some other means of firming the seedbed.

such magnitude that the first moon flight will seem, in retrospect, like a simple jet trip across our continent.

Products from experimentation and research will offer new opportunities for better health and prolonged life.

New, lighter, more durable materials for better homes and buildings in new towns and rebuilt cities that are free of pollution and waste;

New venices for speeding us, and our products, over land and water at hundreds, if not thousands, of miles an hour;

New machines for revolutionizing work habits and more time for creative thinking and leisure;

New prosperity for everyone to share, for those who want to and who make the effort.

This new age is coming as surely as the age that produced Apollo 8.

Will we Pennsylvanians be prepared for it? Or will we fail to see it before it flies by us, as did the aerospace age and with it some of our finest young talent?

That question will be partially answered in the next two years because we have come to a point in the affairs of the Commonwealth where attitudes are polarizing.

One group says progress be

damned. Stop wasting our money.

And at the other end, there are those who say we are affluent and have all the money we need to solve our problems if we will only part with it.

For Pennsylvania's sake we must find the way to reconcile this conflict, as we must continue to take a sane, balanced course toward the solutions to our present problems and still make the effort that will bring us our proper share of the prosperity of the 1970s.

To that end, last week I set before the General Assembly a series of five distinct goals which, if attained, will speed us on the way.

Goals embracing continued economic growth, better living conditions, improving the status of the individual, additional protection for the health and well-being of all citizens, and the improvement, within Pennsylvania, of the democratic process itself.

Pennsylvania is, indeed, headed for a difficult year of decision — for the present and for the new decade ahead. Certainly all the elements of a possible bitter partisan battle are present in Harrisburg.

But, so, too, are responsible men. And I, personally, am hopeful that reason — and the desire to do what is best for Pennsylvania — will overcome any desire for partisan gain. For, only if we can somehow meet these goals can Pennsylvania's progress in the 1970s be secured.

Pennsylvania's Growing!

If your interests and abilities are in tune with today's modern electronic age, Pennsylvania has some great job opportunities that are exactly suited to your skills.

In the past ten years, Pennsylvania's economy has expanded rapidly—so rapidly that new job openings are a daily happening in practically every field. Whether you're interested in aeronautics or zoology (or any of the fields in between), Pennsylvania has more to offer every day for people with the right skills and the ambition to put their talents to work.

For a great future, try the growing Pennsylvania!
