## COWS NEED MORE PROTEIN THAN THEY'VE BEEN GETTING

Dairymen who feed a lot  
of corn silage and  
high moisture ear corn...  
take special heed

As more and more Pennsylvania dairymen move to high energy, low protein crops it becomes increasingly difficult to meet the protein needs for top, profitable milk production.

If protein intake is inadequate for her needs or, even more critically, if there is a wide protein-energy ratio where energy intake is high and protein just meets minimum requirements, growth, feed utilization, and milk yields are rapidly depressed.

Each farm needs to calculate the feeding program which will best supplement its home-grown crops.

Agway's concentrates, ranging from 33% to 60% protein, offer an economical source of this vital nutrient. The wrong feed, even an Agway feed, will not do the job. It must contain protein and energy at the levels needed to supplement your program.
