Would you believe . . . a high-speed plowdown that can't segregate?

It is difficult to believe, isn't it?

High speed plowdown" would definitely indicate a dry broadcast fertilizer. And everybody knows that dry fertilizer ingredients have different shapes and densities and that they tend to segregate during handling and application. The result — uneven, unreliable plant feeding, at best, reduced yields and profits, at worst.

Well, would you believe . . . UNIPELS?

UNIPELS have all three primary nutrients — nitrogen, phosphorus and potash — chemically combined in precise ratio in each pellet! You couldn't segregate the nutrients if you tried.

What's more, every pellet has the same shape and density for the most uniform distribution possible when applied from a broadcast-type spreader. And, no more trouble regulating spreader flow.

The result — a balanced, controlled diet for every plant in the field.

Come see us and learn more about the speed, ease, and effectiveness of UNIPELS.

It'll make a believer out of you!

PIONEER OF BETTER IDEAS IN SILO UNLOADING

A 2-foot diameter impeller isn't the only reason you'll feed cattle faster with a Van Dale silo unloader

HERE'S ANOTHER...

... pioneered by Van Dale back in 1957 . . . the heftier cast iron swinging V-paddles. They give the impeller more unloading capacity. Each 6 lb. V-paddle is weighed, matched, and balanced, then pre-run for more dependable performance. And then there's the solid-weld construction of the heavier gauge impeller housing for longer life in the silo . . . and the biggest impeller throat . . . and there are many more reasons that contribute to Van Dale's superior capacity and reliability in addition to the impeller . . . like the double augers and the . . . But why not let us tell you about them. We'll be happy to drop by to see you at your convenience.
