**Hog Cholera**

Swine production is on the increase in this part of the country and is regarded as one of our major livestock enterprises. Producers are urged to be very careful about the introduction of hog cholera — the most dreaded disease of hogs. Pennsylvania has had only three confirmed outbreaks of cholera this year, but there is danger of infection behind these outbreaks were the importing of out-of-state feeder pigs, and the feeding of uncooked garbage. Pigs from the south and from the west may bring cholera; states have different health regulations and some are still using the modified live virus vaccine to prevent the disease. Producers who do buy out-of-state pigs are urged to keep them in isolation, at least 1,000 feet from any other hogs, and watch them closely for at least 30 days. As long as hog cholera exists in America, the feeding of raw garbage presents a threat of more cholera outbreaks. Prevention is very important because we do not have a cure.

**AGWAY**

Weatherboard-Aluminum siding with a guarantee and a housetime of carefree beauty... and fuel saving insulation.

Install Soffit system. End your trim painting problems forever. Cover windows and door casings. Enclose the eaves and overhang with white painted soffit.

For that finishing touch use colorful aluminum shutters.

Call Harold Kinsey today for Free Estimate. Installed by Experienced Personnel.

**"HONEY WAGON"  
"SEDIMENT  
TRAP"**

A Special, Low-Cost Filter System That Will Add Year's Of Life To Your Spreader!

- Low-Cost protection for Honey Wagon Pumps in case of excessive manure foaming or a sticky float valve.
- Pump stays free from sticky solid material resulting in increased pump life and reduced pump maintenance.
- Easy Installation — you or your Dealer can add this protection in minutes!
- Permanent, Stainless-Steel filter is easily removed for cleaning. A nylon bushing eliminates corrosion.

**ACTUAL TESTS PROVE THE VALUE OF FILTER SYSTEM!**

Actual, un-retouched photo shows the stainless steel filter element after several hours of hauling manure. The gum-like residue, and the foreign material that might have gone through the pump are filtered out. This can greatly increase the service from your Honey Wagon. The permanent filter can be cleaned and used again and again.

Continuous product improvement has always been the policy at Clay Equipment Corporation. This new filtering system is just another example of additional value through Clay Research.

This permanent stainless steel filter effectively remove almost all harmful solids that can damage the pump on your Honey Wagon. You can adapt this system to your spreader at a surprisingly low price.

Our extensive tests indicate that this filter will give our users longer pump life and reduced maintenance on seals, bearings and vanes. It's a wise investment to protect your valuable equipment!

Your Honey Wagon Dealer is also equipped to "Tune-Up" your liquid manure spreader and bring it up to nearly new specifications by adding other improved parts. Here again, the cost is low!

See your Clay Honey Wagon Dealer for an estimate on your Honey Wagon. With proper service it will last you for many years — or write Clay Equipment Corp., Cedar Falls, Iowa for the name and location of your nearest Clay Service Center. You'll be glad you did.
