

**Peach Crop In State Largest Since 1960**

HARRISBURG — The state's peach crop this year may be the largest since 1960, an estimated 120 million pounds. This forecast was made by the Pennsylvania Crop Reporting Service in its first survey of tree fruit pro-

duction for the current season made earlier this month. The Service estimated that the peach production, if realized, will be 13 percent more than last year. The pear crop is expected to total 3,200 tons, down 2 percent from the previous year. Conditions of the sweet cherry crop indicate a 1,100-ton crop. Sour cherry growers in northern areas of the state, particularly in

Erie County, have reported substantial damage from May frosts. First production estimate for the crop will be issued by PCRS on Monday. First estimates of the state's apple crop will be made in early July. Conditions of the fruit is generally good with heavy sets much in evidence.

**FEED FAST...ALL AT ONCE**

Hinged side of Jamesway Fill-N-Feed grain or silage feeder pulls away from J-trough and auger automatically to dump all feed fast...all at once without feed separation. All cattle get the same quality feed. Eliminates injuries from crowding, shoving.

Choice of manual or automatic feeder, timer or sail switch control. Feeder features gear head gate drive and galvanized steel safety cover.

**10% more milk within 30 days...**

**...without adding a cow to your herd and on the same amount of grain and roughage you're now feeding**

Ful-O-Pep Cattle-izer Dairy feed helps your cows make better use of their entire ration — produce 10% more milk while maintaining body weight and butterfat test.

**Rumen digestion changed**  
The dairy cow's rumen breaks the ration down into organic acids. She gets most of her energy from the volatile fatty acids — acetic acid, propionic acid, and butyric acid.

Ful-O-Pep scientists learned how to increase production of these acids and to shift more of the production into high-energy propionic acid. This meant a 20% increase in energy.

**Cattle-izer feed boosts milk production**  
In test after test, cows on Ful-O-Pep Cattle-izer feed increased better than 10% in milk production over control cows. In some cases the improvement showed up within a week, and within a month in all cases.

**Butterfat and body weight maintained**  
Cows on Cattle-izer maintained their butterfat tests and kept their body weight as well or better than control cows.

See your Ful-O-Pep Dealer or district representative now for full details.

"Horses can be replaced — but not the soil!"

**Home Gardeners**

Many home gardeners are interested in a general purpose spray that can be used on many flowers and vegetables for the control of common insects and diseases. The spray schedules call for so many materials that it will require a big inventory to meet all recommendations. In addition, some materials such as

DDT, dieldrin, aldrin, and chlordane are being discouraged for the home vegetable gardener; also, materials such as parathion and guthion are highly toxic and should not be used without special equipment. We suggest a mixture such as malathion or diazinon with a fungicide such as maneb or captan to be used on all flower and vegetable crops.

**TRADITIONALLY NEW... FIELD TO FEEDLOT**

**NOW... A CYLINDER CHOPPER that merits the Gehl name!**

A cylinder cutterhead is the heart of this new Gehl "300" chopper. Nine knives whirl at 1000 RPM to cut and throw material with each razor-sharp slice. Standard tungsten-carbide faced knives and cutterbar... built-in knife sharpener. No feeder apron. Crop attachments pivot with the feed-in mechanism — the opening is always perfectly aligned with feed rolls, providing steady, even bites to the knives. Three attachments available: hay pick-up, one-row, and a two-row that handles both wide and narrow rows.

**HAY PICK-UP**

- Full-width floating auger
- Retractable fingers
