Satisfaction  
That Comes  
From  
Doing A  
Good Job Of  
Farming**

It's a great feeling to know that you are the master of your farmlands . . . that when you treat your soil right, it will treat you right. Liming is one of the most important factors in keeping your soil in the highest productive range. By raising the pH from a level below 6.0 to 6.5 or higher, you can expect to harvest 7 more bushels of wheat per acre, with similar increases for all other forage and cash crops.

whole blood, white blood cell count, and percentages of hemoglobin, calcium, phosphorus, and magnesium.

Thirty Hereford steers, averaging 774 pounds, were used in a 103-day feeding trial. The steers were fed all they would eat. Initially, each steer received an injection of one million international units of vitamin A, was implanted with 30 milligrams of diethylstilbestrol, and was treated with 132 pounds of thibenzole.

All rations were supplemented with vitamins that furnished 2,200 international units of vitamin A, 4,400 units of vitamin D

**Send Soil Samples**  
Early fall is a good time for soil testing. Having soil tests made early aids farmers, gardeners, and soil testing laboratory personnel, says James H. Eakin, Jr., extension agronomist at The Pennsylvania State University. He suggests samples be taken from sod fields to be planted to row crops next spring. Soil samples can be taken at any time during the year as long as the fertilized rows are missed. All samples must be submitted in special containers provided by the county agent. There is a small fee for this service.

and 275 units of vitamin E per 22 pounds of feed.
