About Stretch Fabrics

Stretch fabrics are made so that they are more comfortable than ever and they don't "ride up."

Stretch fabrics give as you move about and that's why stretch fabrics are a wise choice for children's wear, sportswear, and dress wear.

Today's stretch fabrics provide "comfort" stretch which is horizontal and the give is about 25 to 30 percent.

As a general rule, stretch garments are priced higher than similar garments made of non-stretch fabrics. But they are made to have more body, surface texture and freedom from wrinkling.

Stretch fabrics of today can take hard use and snap back to their original shape without leaving bagginess.

You can get stretch in either knitted or woven garments.

Knits, by nature, are somewhat elastic. Stretch fibers make them more so.

Wovens are rigid but stretch yarns give them a hidden stretch quality.

Eggs Made For You

The hen shaped the egg like the atomic submarine to give it strength.

She has lined the egg shell with two fine membranes to keep the contents pure.

She makes the egg into its best quality so we humans need only to keep eggs cool to retain the quality.

The hen has packed more essential nutrients into this small

egg than many other natural products of the same size.

How To Store Unopened Cans

As a general rule it's desirable to store unopened canned foods in a cool, dry place in the home.

It's not necessary to store them in the refrigerator but canned hams are an important exception.

Canned hams under 3 pounds are completely sterilized without being overcooked.

That's why larger hams are pasteurized for extended storage and must be held in the refrigerator until opened and used.

Read labels on canned foods for specific instructions on storage.
