Anyone who grows corn or soybeans knows that our soils tend to be acid. You contribute quite a bit to this acidity each time you apply fertilizers. But Ortho UNIPELS have a "low calcium carbonate equivalent." This means that UNIPELS cause less depression of your soil's pH. And you know with a more favorable soil pH you

are bound to get higher-yields. On top of that, UNIPELS, plowed down in the fall, work for you all year 'round: fall, winter, spring, and summer. That's why it's called "The All-Season Fertilizer" Come see us soon for the facts and figures on how you can save money on liming costs and earn more money from higher yields with UNIPELS.

How you save on liming costs with Ortho UNIPELS
