

**NFU Says Census Will Cost Rural Areas Nine Rep.**

The 1970 census will cost rural areas in the nation the loss of nine congressmen, according to projections of the National Farmers Union.

The NFU projects a loss of one congressman in nine states: Illinois, Iowa, Michigan, North Dakota, Ohio, Oklahoma, West Virginia, Wisconsin, and New York.

California is slated to become the biggest state and pick up six congressmen. Florida is expected to gain two, Texas one, Arizona one and Colorado one.

Most of the population growth in the past 10 years has been in the large urban areas.

The 1960 census indicated there were only 83 congressional districts in which more than 15 per cent of the population lived on farms. This number will be considerably reduced when the new apportionment is completed, the NFU said.

100,000 doctors have given up cigarettes. You can too, says the American Cancer Society.

**Broiler Chick Placements Up Over Year Ago**

Placements of broiler chicks in Pennsylvania during the week ending February 14 were 1,077,000, up six per cent from the same week a year ago and seven per cent above the previous week.

Average placements during the past 10 weeks were 16 per cent above a year earlier.

Settings for broiler chicks were 1,826,000, five per cent above the previous week and 12 per cent above the comparable period a year earlier.

The current three-week total of eggs set is 11 per cent above the same period a year ago.

Inshipments of broiler-type chicks during the past 10 weeks average 10,000, compared with 14,000 a year ago. Outshipments averaged 304,000 during the past 10 weeks, 17 per cent above a year ago.

Placements in the 22 states were 60,095,000, up two per cent

The chart shows both Pennsylvania and U.S. broiler marketings as a per cent of a year ago, including projections into April. The projections are based on placements 9-11 weeks earlier less five per cent mortality allowance. Marketings have been generally running 10 to 15 per cent ahead of a year ago.

from the previous week and 12 per cent above the same week a year ago. Average placements during the past 10 weeks were 14 per cent above a year earlier. Elsewhere, domestic place-

ments of pullet chicks for broiler hatchery flocks by leading a year earlier. The placement data include 3,141,000 during January 1970, six per cent more than domestic placements during January 1969. Total placements (domestic plus exports) were reported at 3,667,000, compared with 3,429,000 pullet chicks sold during the month, plus the number of pullets expected from eggs sold during the preceding month.

**Lambing Season**  
The Spring lambing season is approaching and all shepherds are urged to give special attention to the ewe flock. They should be fed liberal amounts of top quality alfalfa hay, along with a half to one pound of grain per head daily. These feed items will help prevent a ketosis condition in the ewes the last month before lambing. Outside exercise each day is also strongly recommended. Some producers will feed hay on snow or frozen ground at the far end of the exercise lot in order to force the ewes to move around. Special attention to the ewes the last six (6) weeks before lambing will help realize a more profitable lamb crop.

**A new non-stop mower-conditioner from the people who started it all.**

Self-propelled Model 1469 Haybine® mower-conditioner has 9-foot 3-inch cut and full-width, spiral rubber rolls. Keeps going when others plug! Two pull-type models also available: 7-foot 3-inch cut and 9-foot 3-inch cut.

Also ask about the popular pull-type models. Also available now is a used model 460.
