

# READY FOR BALANCED FEED

**JUST THE FEED FOR US  
PIGLETS TO GROW ON!**

## NO. 701 GREEN PASTURES PIG STARTER PELLETS!

### How To Use:—

Start Creep feeding No. 701 when pigs weigh 5 lbs. or are 7 days old and feed through 6th week when pigs should weigh about 35 lbs.

### Amount Required

15 to 20 lbs. per pig.

### Feed Per Lbs. Of Gain During This Period

1.25 to 1.50 lbs.

### Field Tests Indicate:—

1. More uniformity in pigs, fewer runts.
2. More economical gains. Heavier pigs at 8 weeks.
3. Pigs may be weaned at six weeks. This give more time for proper conditioning of sow before re-breeding.
4. Easier to maintain farrowing schedule.

## MOST PALATABLE FEED WE HAVE

*"Sweet as a good muffin"*

### State Tobacco Acreage Expected Down in 1970

Pennsylvania's tobacco growers intend to set 19,000 acres of Pennsylvania Seedleaf for harvest in 1970, five per cent less than a year ago and the smallest acreage in over three decades.

About 90 per cent of the state's tobacco is grown in Lancaster County.

During the past 10 years Pennsylvania's tobacco acreage has ranged from 20,000 to 31,000 acres. The 1965-69 average acreage harvested was 22,400 acres. The current acreage would be the smallest since 1934 when 17,800 acres were harvested, according to current projections by the Pennsylvania Crop Reporting Service.

Based on the recent 5 year average yield of 1,815 pounds a crop of about 34.5 million pounds will be produced. Production in 1969 was estimated at 38.0 million pounds.

The March 1 intentions may or may not materialize depending on weather conditions at planting time, the availability of plants, and growers' reaction to this report. The purpose of this report is to assist growers in making such changes in their acreage plans as may appear desirable.

Growers nationwide plan to set about 898,530 acres of all types of tobacco for harvest in 1970—two per cent less than the 920,640 acres harvested in 1969. An eight per cent decline in burley acreage accounts for most of the drop.

Growers of type 32, dark air-cured cigar filler, and cigar wrapper tobacco are also expected to set less acreage. In many areas, the high cost of financing the crop and labor shortages contribute to the decline.

Flue-cured acreage is expected to be essentially unchanged. Flue-cured and cigar binder may increase slightly.

National allotments for burley, flue-cured, and dark air-cured types 35-36 are down from 1969. Quotas for flue-cured type 21, cigar filler types 42-44, and cigar binder types 51-55 were increased. Basic allotments for flue-cured types 22-23 and Virginia sun-cured type 37 are unchanged.

### USDA Increases Export Effort for CCC Barley

Barley owned by the Commodity Credit Corporation will be offered for export sale at competitive world prices, the U.S. Department of Agriculture has announced.

Barley will be offered for sale FOB vessel from the ports of Duluth/Superior. It will be offered for export prior to Aug. 31, 1970. The action amends the March CCC Sales List.

The barley can be exported to all countries currently eligible for U.S. grain purchases, except those in the European Economic Community.

Annual U.S. exports of barley have dropped from 74.6 million bushels in 1965-66 to 11.5 million in 1968-69. In the first 8½ months of 1969-70, exports totalled only 12 million bushels.

Much of this sharp drop, USDA officials said, has been caused by highly-subsidized barley from other exporting countries being moved into traditional U.S. overseas markets.

CCC barley stocks will be offered at competitive world prices under Announcement GR-212. Invitations to bid will be issued by the Kansas City ASCS Commodity Office. Bids will be received by Export Marketing Service, Washington, D.C. through the Kansas City ASCS Commodity Office.
