

**BOYS AND GIRLS TOGETHER** love brightly patterned sweaters. These two pullovers are knit in "all American" colors to stand out in the school yard. She has discovered Indian lore in the red, white and blue bands which trim the solid blue background of her sweater. He feels like a true blazer in his scarlet sweater with blue and white dot-dash stripes. Hers is made of knitting wisted and his of fingering yarn. Both are in unisex sizes 6-12. Free instructions are available by sending a self-addressed, stamped envelope to the Needlework Editor of this newspaper along with your request for Leaflet PK 4037.

**Sutan<sup>®</sup> + atrazine<sup>®</sup> lets your corn grow free**

Your corn grows free from all major grasses and weeds. Free from the growth stress that weeds cause. Free to develop strong, vigorous roots that reach down to make maximum use of soil nutrients and moisture. Free from extra cultivations, possible root damage and free of trashy fields at harvest time.

This season, use dependable, economical Sutan plus atrazine on all your corn acreage. Stop the toughest grasses and weeds—nutgrass, wild cane, foxtails, fall panicum, Johnsongrass seedlings, crabgrass, annual morningglory, lambsquarters, pigweed, ragweed, nightshade and others that lower your profits. Mix Sutan plus atrazine in the soil as you prepare your seedbed. There's no need to depend on unpredictable rainfall to move the herbicide into the weed seed zone. Sutan and atrazine will be waiting to control weeds as they sprout. Used as directed, Sutan controls weeds without leaving harmful residues in the soil. Free yourself from work and worry...see us today for your supply of Sutan.

The Programmed Hog was conceived a decade ago. But because of the high standards we set for this program, it was not born until just last fall in time to be introduced in the 70's.

The goal: healthy, lean hogs going to market consistently at 200 pounds in less than 160 days.

The profit goal: the lowest possible feed cost for the most marketable hogs.

The method: Research. And more research. And still more research. For ten years we experimented, learned, relearned and experimented some more until we were convinced that we had the most effective combination of feeds and feeding programs possible.

The place: Red Rose Research Farm where we raise approximately 250 hogs a year. Breeding lines include Yorkshire, Landrace and Hampshire with crosses of these breeds.

The result: In the fall of 1969 we farrowed 132 pigs from 11 sows for an average of 12 pigs per sow. Of the 132 farrowed 125 weaned for an average weaning of 11.4 pigs per sow. An outstanding example of the quality of litters raised was that of Sow #94. A York-Hampshire cross, her third litter of 12 pigs were all raised to market weight. The 12 averaged 200.7 pounds in 139 days. Feed conversion was 2.38 pounds of feed per pound of gain. Many other litters achieved equally remarkable records. And all litters were well above average. After a decade of research and new feed development we knew we had achieved the ideal we were looking for. After 128 years of developing and mixing feeds, we are not kidding ourselves into thinking that we have the perfect program. We know, as you know, that nature gives no guarantees of anything. But we do feel that this combination of new Red Rose swine feeds and this scientifically developed and researched feeding program is one of the most effective start-to-finish programs available to hog raisers anywhere in the world.
