

First Project 500 Work Finished in York County

The first completed facility at a Pennsylvania State Park, constructed under the Land and Water Conservation and Reclamation Fund is scheduled for dedication this afternoon (Saturday, May 9), according to Maurice K. Goddard, Secretary of Forests and Waters.

Project 500, the Land and Water Conservation and Reclamation Act, was approved by the voters at the Primary Election in 1967, implemented by Gov. Raymond P. Shafer when he signed the enabling legislation on Jan. 19, 1968, and provides funds for the development of State park lands acquired under Project 70.

The project, which includes boat launching facilities and administrative parking area, is located at the Codorus State Park, near Hanover, in York County, and was completed at a cost of \$153,800.

This will provide a three lane boat launching ramp, a courtesy dock, car and trailer parking lot for about 100 vehicles, another parking area for nearly 150 autos, administration parking area, walks and access roads.

Dr. Goddard pointed out that the Department of Forests and Waters just recently awarded another contract, in the amount of \$138,831, for the construction of Phase I development at this same park. This work consists generally of the construction of access roads and parking lots for the proposed marina and picnic area, and a parking lot and overlook point for the

proposed vista and related items of work. The low bidder for this project was Robert A. Kingsley Inc., of York.

The May 9 program, to begin at 2 p.m., is being sponsored by the York County Board of Parks and Recreation with Ray Wiegand, representing the sponsoring organization, as master of ceremonies.

The Codorus State Park is unique among the outdoor recreational areas within Pennsylvania's State Park program in being the only park in the Commonwealth which represents a joint effort between private industry and the State.

The dam was designed to serve the water supply needs of a private industry, as well as providing a lake and recreation area. P. H. Glatfelter Co. constructed the earth fill dam which is 109 feet high and 1,690 feet long. Completed in mid-1967, the dam created Lake Marburg, an impoundment area of 1,275 acres within the 3,236 acre park area.

Legion Unveils Building

More than 5,000 Legions, Auxiliary members, and their families and friends gathered in Harrisburg recently to dedicate the Pennsylvania American Legion War Memorial Building, just completed in suburban Wormleysburg and overlooking this capital city.

National Commander of The American Legion, J. Milton Patrick of Oklahoma, received applause as he began his dedication address with the remark that "Hilton never created anything more beautiful than this."

What's New?

Extra Step Antibiotic

Animal Health Products, Merck Chemical Division, Rahway, New Jersey 07065 is promoting a water soluble, Floxaid, as a means of heading off disease and of providing "extra step" treatment of a sick flock by building up the stressed birds with nutrients, antibiotics and a broad spectrum of vitamins.

Merck poultry experts say that disease can bring on a period of lowered feed intake due to decreased appetites. The attendant diarrhea can cause a loss of body fluids and energy reserves.

The antibiotic content of Floxaid in effect builds a wall against disease, while giving the birds a chance to pick up those vitamins needed to restore tissues and build up a reservoir of energy, according to Merck.

Sell by Smell

A. O. Smith Harvestore Products, Inc. announces a new promotion program for its haylage system. When scratched, the 3M Company's microencapsulated strips containing half a million bubbles per square inch give off the appealing aroma of mildly-fermented, molasses-like feed.

Bubbled Concrete

Portland Cement Association says the homeowner planning a new concrete driveway or patio should be sure to ask his contractor or ready mix supplier to use air-entrained concrete, especially in areas subject to freezing, as an insurance against possible surface scaling caused by alternate freezing and thawing and use of de-icers. Air-entrained concrete, according to the association, con-

tains small amounts of a special chemical that creates billions of microscopic air bubbles which provide room for water to expand when it freezes, thus preventing damage.

New Sprayer Catalog

A full-color descriptive catalog of a new "GB" model sprayer for six to eight rows can be obtained by writing Clark Manufacturing Company, Atherton, Missouri 64050.

Book of Weeds

The USDA has published a 463 page handbook on "Selected Weeds of the United States" with drawings and descriptions of 224 of the nation's most prevalent weeds.

DeKalb Brand XL Hybrids have a reputation for high test weight as reported by corn farmers everywhere. Disease tolerant XL Hybrids are bred to dent early, and to produce heavy, lustrous ears while stalks are still green.

"DEKALB" is a Registered Brand Name. XL Hybrids is a Variety designation.

Purina Dairy Conditioner Special can prepare cows for good production at low cost

If you're not among the many good local dairymen who have started mixing Purina Dairy Conditioner Special with your own grain to build a research-proved dry cow ration, it can pay you to check into this low-cost way of feeding dry cows.

Purina Dairy Conditioner is a 16 percent protein ration, fortified with extra Vitamins A and D plus phosphorus to help guard against milk fever.

To help you save on dry cow feeding, Purina Research recommends varying feeding levels, depending on cow condition and the quality of your roughages. For example, if a cow is in good condition and your roughages are of excellent quality, you would feed less Purina dry cow ration than if the cow were in only fair condition and if the roughages were of only fair quality.
