

Get Tree Seedlings Now

Farmers of Lancaster and neighboring counties are re-minded that right now is the time to plan for tree planting to be done in the spring of 1971. As in past years, The Glatfelter Pulp Wood Co. of Spring Grove will furnish free tree seedlings to any interested and qualified landowner.

Since the inception of the Com-

pany program in 1951, more than 12 million seedlings have been furnished to landowners in these 13 southcentral Pennsylvania counties: Adams, Berks, Chester, Cumberland, Dauphin, Franklin, Fulton, Juniata, Lancaster, Lebanon, Perry, Schuylkill, and York.

Tree species available this year under the program are

white pine, Austrian pine, pitch pine, Norway spruce, white spruce, Japanese larch and Virginia pine. Orders are filled on a first-come basis so it is important to get your order in early to assure receiving the species you want. All trees are purchased by The Glatfelter Company from the Pennsylvania Department of Forests and Waters.

The Company imposes no restrictions of any kind, but the landowner planting the seedlings must comply with normal state regulations regarding these trees. That is, they may not be used for Christmas trees, decorative purposes, or for wind breaks. Minimum order acceptable is for 1,000 seedlings. All trees are the property of the landowner and he may cut them at a future date for any wood products he desires.

If you are a landowner who is planning to plant trees in 1971 and wish to receive free tree seedlings, act now! To obtain information about placing your order, see your local County Agent, your Forests and Waters Department District Office or write directly to The Glatfelter Pulp Wood Company, Spring Grove, Pennsylvania, 17362. All necessary information and order blanks will be mailed to you.

Do it now before it is forgotten in the rush of the Holiday season and while you can be assured of having your order filled, Glatfelter officials urged

Begin Silage Gradually
Dairymen can avoid the corn silage blues by gradually introducing their cows to corn silage, says Richard S. Adams, extension dairy specialist at Penn State University.

Both the cow's rumen microflora and lining must adjust to a major change in ration, such as the introduction of corn silage. This adjustment may require two to four weeks or more.

Strength, Performance, Dependability. You've got 'em all with VAN DALE'S NEW TRAVELING BUNK FEEDER.

Van Dale's SCF-1400 is the traveling feeder to put you on the track to faster, more profitable operations. Automatically, it delivers up to 40 tons of silage per hour to bunks on a single chain, continuous "shuttle" service. Feeder trough chain is No. 67 pin-tle (12,500 lb. strength) and drive chain is C-550 steel (average top strength of 10,000 lbs.). Interlocking, snap-together galvanized metal components reduce erection time as much as 50%. Suspended or floor-mounted, rails are mounted with Van Dale's exclusive clip-on brackets to provide extra-rigid support. Unit adapts to any feeding need in-barn or out-of-doors.
