# Facts Dairymen Should Know

(Continued from Page 29)

two new fluid milk products and will begin a three month test marketing period The products are iron-fortified whole milk and a milk-orange juice drink

DDI is a two-year old organization supported by the dairy farmer members of 23 northeastern milk marketing cooperatives Its purpose is to develop new dairy products which will increase fluid milk consumption

The iron-foitified whole milk contains 12 mg of iron per quart Although some skim milk and lowfat products are presently fortified with iron and other minerals, this is the first major attempt with whole milk DDI indicates no altering of keeping quality or flavor

Last year's White House Nutrition Conference and a number of surveys point out that a large poition of children and females in the U S are deficient in iron Fortification of milk, bread and other basic foods is an attempt to correct this situation
