

AGWAY

AGWAY PRE-ENGINEERED BUILDINGS FOR AGRI-BUSINESS and COMMERCIAL USES

An Agway building to match your individual requirements

Agway Comprehensive building service can mean providing you a conventional dairy barn or a modern free-stall system . . . from plans to ready-for-milking completion.

Special-purpose buildings, such as this potato storage, are part of Agway's years of experience in agri-business construction and planning available to assist you toward more profitable operations.

Not all Agway buildings are designed for agri-business operation. Some, like this horse barn, fill the bill for country living recreation. Whatever your building need or budget may be, Agway has a solution.

Agway building service specializes in dairy barns of various types and sizes to match your objectives in herd size and management practices. Our building specialist, backed by computer analysis, can work with you to tailor the layout to your operation.

Agway Bee-Line Supply Center 5th ANNIVERSARY SALE

FRIDAY & SATURDAY, MARCH 26 and 27

SPECIAL DISCOUNTS, DOOR PRIZES, REFRESHMENTS.

Oat Seed Research Findings Reported

High quality, certified oat seed of the right variety for a specific farm can mean 20 or more bushels per acre than possible with homegrown seed, according to Dr. Guy W. McKee, professor of agronomy at Pennsylvania State University.

Twenty-four extra bushels was the yield difference between statewide trials of certified oats and all oats grown in Pennsylvania during a 15-year period, Dr. McKee says.

The average yield of all varieties in the demonstration trials was 65.5 bushels per acre over the 15 years. In contrast, the average statewide yield of all oats was only 41.5 bushels per acre. There were several years of below normal rainfall in the 15-year period.

As secretary of the Experiment Station Seed Committee in the College of Agriculture, Dr. McKee works closely with seed improvement programs.

He said high seed quality is indicated by germination ability and freedom from weed seeds. Certified seed, or seed of equal quality bearing the brand tags of reliable seedsmen, is the best assurance of quality. The extra cost is repaid many times over in increased yield, he said.

Penn State recommends six varieties of spring oats for Pennsylvania farms. They are Garry, Pennfield, Orbit, Russell, Clintford, and Jaycee.

For farmers wanting an early maturing variety with stiff straw, Clintford replaces Clinton 59 and the several Clintland selections.

Russell oats, while high yielding, tends to have more stalk breakage than the other recommended varieties.

In the 15-year period of analysis, the average yields per acre were: Russell, 75.8; Pennfield, 73.7; Orbit, 73.1; Garry, 69.2; and Clinton-Clintland types, 61.4.

Pennfield, Orbit, and Russell, released in recent years, were included only during the latter years of the test.

Jaycee, newly recommended, was not in the trials but produces high yields.

Elmer C. Pifer, former Extension agronomist now retired, conducted the 15-year trials.

Help Us Serve You

If your organization didn't make our farm calendar this week, it's not because we don't like you or your organization.

We may have missed it in the rush. Or maybe you forgot to tell us.

Either way, we'd like to extend our farm community service to you.

To get on the Farm Calendar, remind us by calling 394-3047 or 626-2191 or by writing to Lancaster Farming, 22 E. Main St., Lititz, Pa. 17543. And help us serve you better.
