

Chester Springs 4-H'er Is Named IFYE to Do Youth Work in Brazil

Miss Davida McCartney, Chester Springs, has been chosen an International Farm Youth Exchange (IFYE) delegate to do youth work in Brazil. She will leave in mid-June, and will spend her first six months living and working with several different host families.

An additional eight months will be devoted to working with local Extension agents in Brazil organizing and promoting youth groups similar to 4-H Clubs.

Upon her return from Brazil,

Miss McCartney will share her many experiences and observations by appearing before many local groups.

She is the daughter of Mr. and Mrs. Horace E. McCartney, Chester Springs. She has had 10 years experience in 4-H Club work.

While attending Pennsylvania State University, where she majored in home economics education, Miss McCartney was active in the Campus 4-H Club, the College of Agriculture Stu-

Davida McCartney

dent Council, and the "Ag Hill Breeze", a college student newspaper.

She is currently employed by the Cooperative Extension Service as a nutrition assistant working with youth in the Phoenixville area.

IFYE is a 4-H program conducted by the National 4-H Club Foundation in behalf of the Cooperative Extension Service and the U.S. Department of Agriculture. It is a cultural exchange program for promoting better understanding among people of the world.

It involves about 100 youths annually from the United States and another 100 youths from other countries. Since its inception over 20 years ago, 68 countries have participated in this exchange program with the United States and Puerto Rico. Each year, a few IFYE delegates are chosen for an extended period of time to participate in a youth development project such as the one for which Miss McCartney was selected.

The IFYE program depends on the support and interest of local

people. About one-third of the change effort Committee members are Robert M. Dunn, Chester Springs RD2, Mrs. William High Jr., Pottstown RD1, Mr. Robert Hodge, West Chester RD4, Mrs. Lloyd Mast, Elverson RD2; Mr. Eugene McDowell, Lincoln University RD1, Mrs. Lewis Pyle, North Hill, Chester Springs, Mrs. Gideon K. Stoltzfus, Atglen RD1, and Mrs. Richard Walter, Cochransville RD2.

A Chester County IFYE Committee administers the local IFYE program and raises funds to help support this cultural ex-

HESSTON DIRECT-FEED 320

Damp Yankee

If you cut in small, rough fields under high humidity conditions... the Hesston 320 is the machine for you. Lets you windrow or swath, to suit the weather conditions in your area. Come in today and see how this tough, economical machine can produce big for you.

HESSTON

This is the only Windrower that gives you "Hesstonized Hay."

PURINA

BIG'UN's here!

NOW, FROM PURINA'S HORSE RESEARCH CENTER

comes this revolutionary new Chow that's put better than 1½ inches a month in height, 2½ inches in length, and 3 inches a month in heart girth on our own colts and fillies, during the weaning period.

Announcing: a dry "pop-up"! Can cut planting time in half!

ORTHO

Ortho Unipel STARTER SPECIAL
A starter? As a "pop-up"? It has to be special. It is. STARTER SPECIAL is a completely unique product. Here's why.

- Physical Uniformity STARTER SPECIAL pellets are made to the same shape and density for maximum consistency and control in application.
- Chemical Uniformity Each and every STARTER SPECIAL pellet has all three primary nutrients — nitrogen, phosphorus, potassium — chemically homogenized in precisely the most desirable ratio 13-34-10. The nutrients can't separate or segregate during handling as with troublesome, hard-to-regulate dry blends.
- Double Duty Nutrients STARTER SPECIAL has both quick-acting and long-lasting nitrogen and phosphorus for thorough plant feeding. There is no urea or diammonium phosphate that might endanger the seed through liberation of free ammonia.

Of course, these features also make it highly effective as a banded starter. But, with only slight adaptation of most planters, it can be applied directly with the seed in exacting measurement for safety and maximum response.

With this kind of control, you apply much less material — only 1/3 the amount needed for banding. And the reduced material handling could cut your planting time in half!

So, save time, trouble and money at planting time. See us soon about applying STARTER SPECIAL this spring as a dry "pop-up".
