

## Students Attend Farming Institute

Five students from Warwick High attended the Lancaster County Farmers Co-operative Council meeting at the Farm and Home Center, Lancaster recently. Attending the educational institute, sponsored by co-operative organizations, were: Judy Snyder, seated left, and Debra Gregory, members of the Future Homemak-

ers of America. Standing are: left to right, Gerald Martin, Eric Martin, and Ken Grube, Future Farmers of America. Debra and Ken were selected as finalists for selection to attend the Pa. Association of Farming Co-operatives at Shippensburg State College in July.

### Sire Power Plans Sale

Entries are needed now for the 1971 Sire Power Holstein Sale August 3 at the Kutztown Fairgrounds. Selections will be made during May under the supervision of A Doty Remsburg, Jefferson, Maryland.

To qualify for selection, cattle must be sired by present or past sires in service at Sire Power, NEBA, or The Maryland-West Virginia Bull Stud. They should be Very Good or higher or of potential VG caliber with minimum records of 15,000 lbs milk ME. Any breeder wishing to submit an entry is urged to contact Verne Adams at Sire Power, Tunkhannock, RD2, Pa 18657.

PROTECT YOUR FARM WITH A PINCOR PTO

#### TRACTOR DRIVEN ALTERNATOR

- 50,000 watts surge capacity
- 16,000 watts continuous duty
- Slow speed — 1800 RPM operation
- Cool running triple chain drive transmission
- Heavy duty motor starting
- Close voltage regulation
- Meets NEMA codes
- Heavy duty construction
- Induction hardened input shaft
- Rain proof construction
- Completely wired control box
- Three phase available

## WHAT IS BUX® ?

Bux is a carbamate insecticide developed by Ortho for control of resistant and non-resistant corn rootworms.

### WHY BUX IS BETTER!

Bux is the only corn rootworm insecticide that offers all the following advantages:

- Effective, season-long control with a single application no matter how early you plant. Bux stays active throughout the hatching and larval stages of rootworm development.
- Doesn't leave harmful residues
- Less hazardous to us. There's no need to wear special equipment such as a respirator or goggles, when using Bux.
- No objectionable odor
- Flows freely through application equipment
- Resists leeching in rainy weather
- Won't damage application equipment. Bux is formulated on non-abrasive clay granules. So there's no worry of tearing up your pesticide applicator.
- Recommended throughout corn belt. Bux is recommended by University Entomologists in all states where resistant rootworms are a problem.

## Salvage Eliminated-- Latest Move to Stop Hog Cholera

Apparently healthy animals may no longer be removed from swine herds infected by or exposed to hog cholera, the U.S. Department of Agriculture has announced.

To reduce the risk of spreading hog cholera—an infectious, highly contagious viral disease that affects swine only—officials of USDA's Agricultural Research Service said all animals from infected or exposed swine herds must now be destroyed and disposed of safely by burial, rendering, or special processing. Herd owners are paid State and Federal indemnities to help compensate for losses.

The salvage provision had been instituted in 1966 to allow several leading hog-producing States to conserve indemnity funds and thereby enter final phases of the Cooperative State-Federal Eradication Program. Under the discontinued procedure, all animals from infected and exposed swine herds were examined by animal health officials, those showing no signs of illness could be sent directly to meat packers for immediate slaughter.

With salvage, there was no risk to human health if any trace of hog cholera virus found its way into consumable pork or pork products. But there was a risk of spreading the infection to susceptible hogs if they were fed garbage containing any meat scraps from salvaged animals.

The action to end salvage is in line with recommendations of the Secretary of Agriculture's National Hog Cholera Eradication Advisory Committee, the U.S. Animal Health Association's Committee on the Nationwide Eradication of Hog Cholera, the National Hog Cholera Committee of Livestock Conservation, Inc., and other responsible groups. In addition, a recent USDA survey indicated that all but one State favored discontinuance of salvage.

Target date for complete eradication of hog cholera in the United States is December, 1972.

### Tylan + Sulfa

Here is the best additive for both immediate and long range benefits in young pigs

Field trials and our customers' on-the-farm results have shown Tylan+Sulfa to be a superior additive for use in pig rations. This outstanding record is why we make it available—and why we recommend it—in our starter feeds. The advantages of Tylan+Sulfa (such as vibronic dysentery control, maintaining gains during atrophic rhinitis attacks) makes its use especially beneficial during the early starting period.

The better starts possible with Tylan+Sulfa usually result in pigs that are stronger, more vigorous, and bigger than they might be without this added assistance. Healthy pigs like this are worth more. Yes, it does pay to feed Tylan+Sulfa . . . for both immediate and long range benefits.
