RD2, sentinel; Amos Sauder, Manheim RD1, secretary, and John Miller, Elm, chaplain.

These officers recently attended the Lancaster County FFA Leadership Training Conference at Solanco High School. Mark A. Campbell is chapter advisor.

Sweet Cherry Standards Are Revised by USDA

The U S Department of Agriculture recently announced revision of the U S standards for grades of sweet cherries, to adjust the tolerances for defects allowed en route or at destination and at shipping point

USDA's Consumer and Marketing Service said the revision incorporates the changes as proposed March 19

The revised standards were scheduled to be published in the May 7 Federal Register and will become effective on date of publication.

Copies of the revised standards may be obtained from the Fruit and Vegetable Division, Consumer and Marketing Service, U S Department of Agriculture, Washington, D C 20250

**Announcing:
a dry
"pop-up"
Can cut
planting time
in half!**

Ortho Unipel STARTER SPECIAL.

A starter? As a "pop-up"? It has to be special.

It is STARTER SPECIAL is a completely unique product. Here's why:

- Physical Uniformity STARTER SPECIAL pellets are made to the same shape and density for maximum consistency and control in application.

- Chemical Uniformity Each and every STARTER SPECIAL pellet has all three primary nutrients - nitrogen, phosphorus, potassium - chemically homogenized in precisely the most desirable ratio 13-34-10. The nutrients can't separate or segregate during handling as with troublesome, hard-to-regulate "dry blends"

- Double Duty Nutrients. STARTER SPECIAL has both quick-acting and long-lasting nitrogen and phosphorus for thorough plant feeding. There is no urea or diammonium phosphate that might endanger the seed through liberation of free ammonia.

Of course, these features also make it highly effective as a banded starter. But, with only slight adaptation of most planters, it can be applied directly with the seed in exacting measurement for safety and maximum response.

With this kind of control, you apply much less material - only 1/3 the amount needed for banding. And the reduced material handling could cut your planting time in half!

So, save time, trouble, and money at planting time. See us soon about applying STARTER SPECIAL this spring as a dry "pop-up".

**sustain top
production
with the
BABCOCK
B-300**

Keeping production up... costs down... is the profit key in poultry operations. And more and more records on commercial flocks of Babcock B-300's... "The Businessman's Bird"... show sustained production of top quality eggs... often with an additional 20 to 30 eggs per bird housed over other strains. Come In... look at the records and the B-300... "The Businessman's Bird".
