## Beef Cattle Conference Scheduled at Penn St.

A comprehensive Beef Cattle Conference will be held March 21, 22 and 23 at Pennsylvania State University.

Although the conference will emphasize purebred and commercial brood cow production systems, information will also pertain to finishing beef cattle systems. The conference will be held in the Meats Laboratory and the Beef-Sheep Center at University Park.

The program will include discussion of practices involved in establishing and maintaining pastures for profitable pasture and forage production. Methods of storing forages for wintering beef cows and calves will be discussed.

Other important topics will include maintaining herd health, calculating rations for different types of beef cattle, constructing and maintaining low cost and effective equipment and facilities, and a demonstration of certain beef cattle production skills.

Another section of the program will go into detailed discussions of methods of improving the inherited ability of cattle, and record keeping methods.

A special feature will be an in-depth discussion of the merits of some of the new breeds recently introduced into the United States.

Another "special" will be a consideration of the controversial "optimum cow body size" question that recently has become extremely important in producing cattle.

According to Dr. Lowell L. Wilson, professor of animal science and chairman of the program, "This conference ties together many of the essentials of modernizing cow-calf production systems. The beef cattle business is changing rapidly. To efficiently use land through beef cattle, the producer must incorporate as many modern production practices as he possibly can.

"In Pennsylvania, a state producing only approximately 25 per cent of the total beef consumed in the state, there is an opportunity to raise more beef cows. We hope that by providing this program, we can help develop this potential," he affirms.

For further information regarding the program, contact the Agricultural Conference Coordinator, 410 J. O. Keller Building, University Park, Pa. 16802. County agents in Pennsylvania will also have information.
