 breeding, of feeding, of disease and insect control. Training should also cover such technological phases as selection, operation, care and maintenance of farm machinery and the

mechanical skills needed on the farm. Much progress is being made in providing this type of instruction in agriculture to students in high school and beyond high school. Many schools now offer specific training in several areas of agriculture and offer opportunities for high school

students and graduates to learn skills needed for employment in agriculture. Education is essential for people in agriculture today. Modern farming is a dynamic, changing occupation challenging our ability and desire to continue learning and developing new ideas and skills.

**NEW COMBINATIONS ON CORN CONTROL HARD-TO-KILL BROADLEAF WEEDS AND GRASSES OTHERS MISS**

## **BANVEL<sup>®</sup> + LASSO<sup>®</sup>**

PRE-EMERGE TANK-MIX ON CORN\*

## **BANVEL + atrazine**

EARLY POST-EMERGENCE TANK-MIX ON CORN

How to beat young, tough broadleaves, vines, weed grasses before they damage your corn?

If you know where and what your weed problem is, the new tank-mix combination, Banvel + Lasso, goes down just after planting, before corn or weeds emerge . . . timed to destroy weed and grass seedlings, when corn cannot compete successfully with weeds.

Depend on this combination like insurance coverage. No harm to corn. No need to incorporate. No carryover. No residue problems.

Banvel + atrazine tank mix can do the broad-spectrum weed control job on weeds resistant to 2,4-D and not adequately controlled by atrazine alone.

Allows you first to make sure how much and what

kind of a weed problem you have. Spray 3 to 15 days after corn emerges, when grasses are less than two inches.

No brittleness caused in corn. Ideal for narrow-row, minimum-tillage programs. One early-post treatment gives season-long control. So, usually no need to cultivate.

See your dealer or custom applicator about Banvel + Lasso or Banvel + atrazine combinations that work before weeds hurt.
