About Ham
 Most of the ham you see on the market today is cooked and ready to eat. Extension consumer specialists at Pennsylvania State University say you have a choice of bone-in or bone-out hams. You can buy it canned or uncanned. Bone-out hams cost more per pound but the real comparison is

the number of servings. Boneless hams may not cost as much as it seems when you compare them with bone-in hams. Read the label on the ham you want to buy. It tells you if it is the shank or butt portion—the center slices have been removed. The butt half

usually offers more meat in relation to the bone, but the shank half is easier to carve. The difference in price usually takes care of the slightly smaller amount of meat in the shank half.

BELT® BASIC SOIL INSECTICIDE OF THE '70s. NEW IMPROVED GRANULES GUARANTEED TO FLOW FREELY.

GUARANTEE

EFFECTIVE INSECT CONTROL AND FREE FLOW GRANULES

Should Belt 33G fail to effectively control the soil insects listed on the label, when used specifically according to use directions shown, or should Belt 33G not flow adequately through a standard spreader that has been properly adjusted, maintained, and in good working condition, Velsicol will refund an equivalent amount of Belt 33G insecticide to that used on acreage where Belt performance was not satisfactory (verified by paid invoice showing price and quantity purchased) if the following conditions are met:

- A. Grower has completed and returned the guarantee registration card available at his dealer's within 45 days of Belt 33G purchase.
- B. Notice of dissatisfaction of product performance and handling covered by this guarantee must be submitted in writing within 60 days of application.
- C. A qualified Velsicol representative must be assured that the purchaser used Belt 33G according to label directions. The Velsicol representative must have the opportunity to observe insect control or handling performance to determine whether or not Belt provided economic control or was applied with properly maintained equipment.

IMPORTANT: Refund is limited to acreage on which Belt performance or handling was not satisfactory. Be sure to fill out and mail the registration card, available at your chemicals dealer, to verify your purchase of Belt 33G soil insecticide.

The broad-spectrum soil insecticide, Belt, is growing rapidly in popularity. Controls the widest range of soil insects that attack corn.

Belt protects corn till harvest, regardless of weather. Little hazard to feed, water, wildlife, when used properly, Belt is comparatively low-toxic. Its active ingredient is covered by a tolerance on corn of 0.3 ppm.

Velsicol guarantees flowability of Belt 33.3G granules. Easy to handle, it's applied and incorporated at or prior to planting.

In "no-till" planting, a once-over application proves especially effective and economical. Belt stays in the soil . . . and works!

The emulsifiable concentrate, Belt 72ECF, is also available if you prefer liquid application.

You can have confidence in Belt. It's chlordane at its best, for economical, broad-spectrum control. At your ag chem dealer's.
