Fix-It Tip

Eliminating condensation is a matter of doing many things, a trial and error process. Condensation occurs when warm, moisture-laden air hits a cold surface—basement walls, cold water pipes, toilet bowls. Part of the cure

is to eliminate some of the moisture before it enters the air.

Clothes dryers should be vented so that moisture escapes outdoors. Exhaust fans in kitchens will cut down some of the moist air in the house. There should be fans in bathrooms, too. Opening a window when washing clothes or cooking will help.
