Household Safety Check

We are in the midst of Farm Safety Week. While safety is important everywhere, we are reminded by the National Safety Council that most accidents occur in the home.

The American Vocational Association and National Safety Council jointly prepared a home safety check list. We have been presenting sections from this list from time to time, asking you to review your work habits by answering either: A-Always; S-Sometimes; N-Never, or O-No opportunity, to a list of questions. How will you answer these questions?

When I Iron - I Do -

- Use a well-balanced, rigid ironing board.
- Keep my hands away from the hot area of the iron
- Place hot steam iron on its heel when not in use.
- Use non-flammable or treated ironing board cover.
- Know how to operate safety release on ironer.
- Check safety release on ironer before starting to iron
- Have safety release repaired immediately if it is not operating.
- Disconnect iron or ironer at the outlet when called away from ironing.
- Release ironer roll when equipment is not in use.
- Position iron firmly, when rearranging clothes, to avoid dropping on the floor.

When I Wash Clothes I Do -

- Wear rubbers or rubber-soled shoes if floors are damp when using electric laundry equipment.
- Know how to operate emergency releases on laundry equipment.
- Check safety release on wringer before starting to wash, and have it repaired immediately if not operating
- Make sure hands are dry before connecting or discon-

Reverse Process

The usual fish breathing style is reversed by certain bottom-dwelling rays. These bring water in through the tops of their heads and out through their gills. They would draw sand and bottom debris into their gills if they were to breathe as most fish do

necting electrical laundry equipment or touching light switches.

- Check to see if safety lid shuts off washer when lid is raised (if automatic washer has this feature).

- Check to see if safety door shuts off dryer when door is opened (if dryer has this feature).

- Test temperature of hot water from faucets cautiously before putting hands in it

- Avoid carrying loads of clothes so big I cannot see where I am walking

- Make sure appliance cords do not get damp under normal use

- Follow manufacturer's directions for proper removal of lint from dryer

- Have motors of laundry equipment cleaned if they have collected lint and oil.

- Make sure permanently connected electrical laundry equipment was properly grounded at the time of installation (before using for the first time).

- Check to see if load of clothes is evenly balanced in washer

- Make sure washer is not subjected to below freezing temperature as water is valved and pump can freeze and cause damage.

- Turn off water on inlet hose when automatic washer is not in use. This avoids pressure which, in time, can freeze and cause hose to burst

- Have a light over washer so I don't work in a shadow.

HOLLAND STONE
a luxury you can afford

Holland Stone was created especially for the innovative builder. It is unique in that it affords the builder an opportunity to design with the look of hand cut stone at the lower cost of split face building units. Actually a man made stone, Holland Stone is an exacting blend of stone aggregates that lend their natural colors for lasting beauty and permanence. Ten distinctive colors, plus a wide variety of shapes and sizes, offer a wealth of design potential for residential, commercial, institutional construction. Almost any exterior or interior decorating motif can be achieved from classic to colonial to contemporary.

Get Big, Big Results with ENRICHED FEEDS

MR. FARMER - WHO?

- Put the first trade marked feed in 100 lbs. bags?
- Made scientifically formulated feed since 1902?
- Was the first in the industry to have a cereal chem lab?
- Employes chemists, nutritionists, veterinarians and engineers for your benefit?
- Has 30 research centers in order to make better feeds for you?
- Puts 10 per cent of their pre-tax earnings into research for you?
- Has an 820 acre farm to raise livestock for "on the farm" testing?
- Flushes their equipment after each type of feed, to prevent contamination?
