**Facts for Dairymen**  
by **N. Alan Bair**, Assistant County Agricultural Agent

**Dairy Situation**  
The rapidly rising and extremely unstable feed market in our Lancaster County area is certainly not a very welcome situation. The price of protein feeds is changing drastically from day to day. As anyone knows who watches the local hay market, the price of this rather necessary dairy feed is setting some all-time record highs.

On the other side of the milk bucket, the USDA reports for the first time since 1955 the per capita, as well as the total milk consumption, is increasing. Each person in the U.S. will probably consume an average 562 pounds of milk in all dairy products in 1972, up one per cent from last year's level. It is reported that in the Philadelphia area Class I sales are up. Other areas with strong promotion programs are also reporting increases in Class I sales, plus a big increase in cheese sales.

As a local dairyman, how do these two situations affect you? The solution to this question can only be answered by you.

The price of protein is almost out of your control since this is a national and world situation. Hay prices seem to vary tremendously.
