MONDAY, MARCH 26, 1973

11 A.M. Sharp

DAIRY EQUIPMENT: DeLaval pipe line for 60 stanchion barn; 6 DeLaval auto. milkers; complete DeLaval washing system; DeLaval 600 gal. direct expansion bulk tank w-5 horse compressor.

DAIRY CATTLE: This herd consists of 100 head of HIGH GRADE HOLSTEIN DAIRY COWS. Twenty-five cows have freshened in the last 60 days; 20 are close springers; the balance are in full flow of milk and re-bred for average months. Of those cows milking now, the average is 51 lbs. per cow. All animals will be examined for pregnancy. The best purebred bulls available have been used for breeding. Eighty per-cent of the cows are between 2 and 4 years of age. They are large in size and show quality; udder placements are excellent. This herd is T.B. Accredited, Certified Bangs Free; tested within 30 days of sale for interstate shipment. Milk weights, breeding dates, freshening dates, etc will be given at sale time.

Lunch will be served.

Pa. Farmers Aid Wildlife

Pennsylvania farmers feed, not only cattle, hogs, and poultry, but everything that flies, swims, runs, or crawls on the farm. And, the 1972 report of the Soil Conservation Service shows that farmer encouragement of wildlife is on the increase according to State Conservationist Benny Martin.

Martin reported that the SCS assisted farmers and other landowners improve more than 200,000 acres of land and water areas for the benefit of wildlife. The establishment of food, water,

and cover for wildlife helps increase populations of pheasants, rabbits, quail and ducks, according to the Service.

Martin said that the 200,000 acres of habitat improvement is only a small part of the Pennsylvania farmer's aid to wildlife. Popular conservation practices as ponds, strip cropping, waterways, and improved grassland also attract and provide food and cover for many kinds of wildlife.

The conservation measures not only support wildlife but they improve fish habitats by reducing stream sedimentation. Nutrients insecticides, pesticides, and organic wastes are also held on the land and kept out of the waterways by the

conservation measures.

In addition to fishing, other recreational uses of the waterways of the Commonwealth are enhanced by the soil conservation practices farmers apply to the land. Martin added.

One-Man Farm

(Continued From Page 48)

seasonal, providing only half-time productive employment.

There is, however, an opportunity for the tenant operator to earn a fairly substantial return to management on the technically optimum one-man farm, assuming he can get the capital to equip and operate it. (This study also contains comparable data for one-half and two-man farms, the two-man operation having twice the acreage of the one-man farm.)

Tenant v. owner. If these farms were run by debt-free owners instead of tenant operators, the net farm income would show a component in addition to a return to operator's labor and to his management. This would be the return to land capital. Income from land capital explains why many debt-free owner-operators are able to make a living considering their low return to labor. They may have inherited the land capital or accumulated it through appreciation in land values.

The models for technically optimum farms were based on conditions in 1972, and hard to predict are the forces that will increase the optimum size in the future.

Miracle of machines. Today's

technically optimum one-man crop farm is half again as big as it was just 10 or 15 years ago. It grew in response to increases in the size and capacity of the tractor and other farm machines. Since the early sixties, for instance, farmers have shifted from four-row to six-row planters and cultivators for corn, soybeans, cotton, and potatoes. Wheat, barley, and rice producers are using wider tillage machines and seeding drills.

In the 1980's . . . It is unclear whether the advances in machinery will be as dramatic during the next 10 years, according to the economist who made this study. To some extent, farm machine sizes change in response to buyer demand. This in turn depends on the buyer's ability to get more land, either through rental or purchase.

C. H. WOLGEMUTH & SONS ANNUAL ALL DAY FARM EQUIPMENT SALE

SATURDAY, APRIL 7, 1973
