SPECIALIST IN YOUR FIELD

**Mike Finamore was told he had leukemia.
Nine years ago.**

When Mike Finamore was thirteen years old, he was told he had leukemia. At that time, this meant he had five, maybe six months, to live. But just about then, leukemia research produced some dramatic results: A special combination of drugs that would kill the leukemia cells in the blood and permit the person to live longer than ever before. So Mike was treated. And it worked. He didn't die.

Instead, he became one of the fortunate few to have leukemia and live. And today his weekly treatments enable him to lead a normal life. In fact, right now he's putting the roof on a house he built himself. And when it's finished there will be a double celebration. The new house. And Mike's 22nd birthday. Most people expect presents. Mike's happy just to have a birthday.

OPEN FRONT GRAVITY VENTILATED

TOTALLY ENCLOSED ENVIRONMENT CONTROL

THERE ARE MORE THAN THREE SIDES TO THE HOG CONFINEMENT QUESTION

Nearly ten years of testing and farm experience have taught us that there are many sides to the question of which type of finishing facility is best for the hog producer. Many producers favor the open-front, gravity ventilation type of facility. We have all the Big Dutchman equipment necessary for the open-front facility. Other producers favor a total environmental control finishing facility. Such a facility provides greater control of the hog's environment, whatever the climatic conditions outside, through the Big Dutchman Evap-O-Pad ventilation system and the use of partial slats. Open-front or total environmental control; let us help you put it all together! Whichever side of the question you take, we have the equipment you need.

Big Dutchman.
A U.S. INDUSTRIES COMPANY.
And that makes a world of difference.
