

### Which Bug is the Termite?

The top one, the bottom bug is a flying ant. Notice its narrow waist. The termite has a broad waist. They're quite different, actually. If you have termites or suspect them in your home, call us.

### Fix-It Tip

When water goes down the drain slowly it won't be long before it doesn't go down at all. Grease and soap may cause a drain to fill up and lint, hair and other bits of material will become trapped and eventually interfere with the flow of water.

Chemical drain cleaners are effective but extreme caution must be used as they are extremely caustic. Using them in small amounts at frequent intervals is often recommended to prevent stoppage, but you can do just as well by occasionally pouring some boiling water down the drain and allowing hot water to run for a minute or two.

Stoppage generally occurs in the trap, the U-shaped pipe below the drain opening. Purpose of the trap is to hold water which prevents sewer gas from seeping in back into the house.

### John Deere Plateless Planters lay in your seed with "fingertip care"

How could you more naturally approach "hand-planting" population control than with the exclusive John Deere finger-pickup mechanism? Each finger selects an individual kernel of corn (any size) and gently transports it to just above the waiting seedbed. From there it's a short, natural-gravity drop to the seed trench. Bouncing and rolling are minimized. For even more control, check John Deere Compaction runners. They form a V-shaped trench that tends to trap seed at optimum depth. Stop in soon for more details.
